Name STK10

Synonyms LOK

Function Serine/threonine-protein kinase involved in regulation of lymphocyte

migration. Phosphorylates MSN, and possibly PLK1. Involved in regulation of lymphocyte migration by mediating phosphorylation of ERM proteins such as MSN. Acts as a negative regulator of MAP3K1/MEKK1. May also act as a cell cycle regulator by acting as a polo kinase kinase: mediates phosphorylation of PLK4 is with a constant and data require additional paid and acting as a polo kinase kinase.

PLK1 in vitro; however such data require additional evidences in vivo.

Cellular Location Cell membrane; Peripheral membrane protein

Tissue Location Highly expressed in rapidly proliferating tissues (spleen, placenta, and

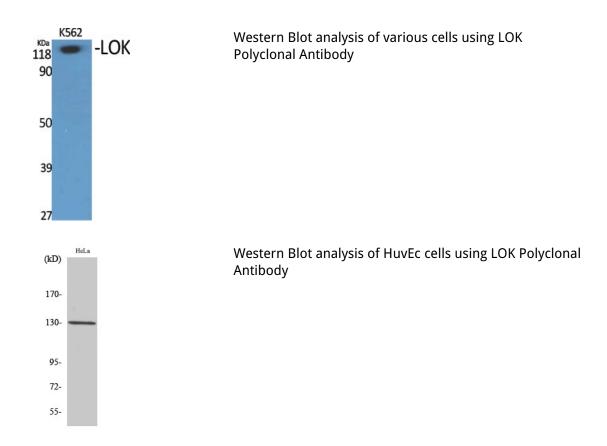

peripheral blood leukocytes). Also expressed in brain, heart, skeletal muscle,

colon, thymus, kidney, liver, small intestine and lung.
