#### **Protein Information**

Name CHRM2

**Function** The muscarinic acetylcholine receptor mediates various cellular responses,

including inhibition of adenylate cyclase, breakdown of phosphoinositides and modulation of potassium channels through the action of G proteins. Primary transducing effect is adenylate cyclase inhibition. Signaling promotes phospholipase C activity, leading to the release of inositol trisphosphate (IP3);

this then triggers calcium ion release into the cytosol.

**Cellular Location** Cell membrane; Multi-pass membrane protein. Postsynaptic cell membrane;

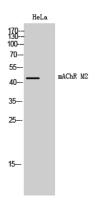

Multi-pass membrane protein. Note=Phosphorylation in response to agonist binding promotes receptor internalization {ECO:0000250|UniProtKB:P06199}
