

TPX2 Polyclonal Antibody

Catalog # AP72895

Product Information

ApplicationWB, IHC-PPrimary AccessionQ9ULW0ReactivityHuman, Mouse

HostRabbitClonalityPolyclonalCalculated MW85653

Additional Information

Gene ID 22974

Other Names TPX2; C20orf1; C20orf2; DIL2; HCA519; Targeting protein for Xklp2;

Differentially expressed in cancerous and non-cancerous lung cells 2; DIL-2; Hepatocellular carcinoma-associated antigen 519; Protein fls353; Restricted

expression prolifera

Dilution WB~~Western Blot: 1/500 - 1/2000. Immunohistochemistry: 1/100 - 1/300.

ELISA: 1/10000. Not yet tested in other applications. IHC-P~~N/A

Format Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.09% (W/V) sodium

azide.

Storage Conditions -20°C

Protein Information

Name TPX2

Synonyms C20orf1, C20orf2, DIL2, HCA519

Function Spindle assembly factor required for normal assembly of mitotic spindles.

Required for normal assembly of microtubules during apoptosis. Required for chromatin and/or kinetochore dependent microtubule nucleation. Mediates

AURKA localization to spindle microtubules (PubMed: 18663142,

PubMed: 19208764, PubMed: 37728657). Activates AURKA by promoting its autophosphorylation at 'Thr-288' and protects this residue against dephosphorylation (PubMed: 18663142, PubMed: 19208764). TPX2 is

inactivated upon binding to importin-alpha (PubMed:<u>26165940</u>). At the onset of mitosis, GOLGA2 interacts with importin-alpha, liberating TPX2 from importin-alpha, allowing TPX2 to activate AURKA kinase and stimulate local

microtubule nucleation (PubMed:26165940).

Cellular Location Nucleus. Cytoplasm, cytoskeleton, spindle. Cytoplasm, cytoskeleton, spindle

pole. Note=During mitosis it is strictly associated with the spindle pole and with the mitotic spindle, whereas during S and G2, it is diffusely distributed throughout the nucleus. Is released from the nucleus in apoptotic cells and is detected on apoptotic microtubules.

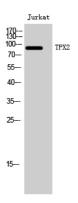

Tissue Location

Expressed in lung carcinoma cell lines but not in normal lung tissues

Background

Spindle assembly factor required for normal assembly of mitotic spindles. Required for normal assembly of microtubules during apoptosis. Required for chromatin and/or kinetochore dependent microtubule nucleation. Mediates AURKA localization to spindle microtubules (PubMed: 18663142, PubMed: 19208764). Activates AURKA by promoting its autophosphorylation at 'Thr-288' and protects this residue against dephosphorylation (PubMed: 18663142, PubMed: 19208764). TPX2 is inactivated upon binding to importinalpha (PubMed: 26165940). At the onset of mitosis, GOLGA2 interacts with importinalpha, liberating TPX2 from importinalpha, allowing TPX2 to activates AURKA kinase and stimulates local microtubule nucleation (PubMed: 26165940).

Images

Western Blot analysis of Jurkat cells using TPX2 Polyclonal Antibody. Secondary antibody was diluted at 1:20000 cells nucleus extracted by Minute TM Cytoplasmic and Nuclear Fractionation kit (SC-003,Inventbiotech,MN,USA).
