Protein Information

Name MED24

Synonyms ARC100, CRSP4, DRIP100, KIAA0130, THRAP4

Function Component of the Mediator complex, a coactivator involved in the regulated

transcription of nearly all RNA polymerase II-dependent genes. Mediator functions as a bridge to convey information from gene- specific regulatory proteins to the basal RNA polymerase II transcription machinery. Mediator is recruited to promoters by direct interactions with regulatory proteins and serves as a scaffold for the assembly of a functional preinitiation complex

with RNA polymerase II and the general transcription factors.

Cellular Location Nucleus.

Tissue Location Ubiquitous. Abundant in skeletal muscle, heart and placenta.
