#### **Protein Information**

Name VIM ( HGNC:12692)

**Function** Vimentins are class-III intermediate filaments found in various

non-epithelial cells, especially mesenchymal cells. Vimentin is attached to the nucleus, endoplasmic reticulum, and mitochondria, either laterally or terminally. Plays a role in cell directional movement, orientation, cell sheet organization and Golgi complex polarization at the cell migration front (By similarity). Protects SCRIB from proteasomal degradation and facilitates its localization to intermediate filaments in a cell contact-mediated manner (By

similarity).

**Cellular Location** Cytoplasm, cytoskeleton. Nucleus matrix

{ECO:0000250|UniProtKB:P31000}. Cell membrane

{ECO:0000250 | UniProtKB:P20152}

**Tissue Location** Highly expressed in fibroblasts, some expression in T- and B-lymphocytes,

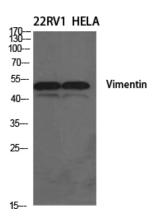

and little or no expression in Burkitt's lymphoma cell lines. Expressed in many

hormone-independent mammary carcinoma cell lines.
