#### **Protein Information**

Name CCL8

Synonyms MCP2, SCYA10, SCYA8

**Function** Chemotactic factor that attracts monocytes, lymphocytes, basophils and

eosinophils. May play a role in neoplasia and inflammatory host responses. This protein can bind heparin. The processed form MCP-2(6-76) does not show monocyte chemotactic activity, but inhibits the chemotactic effect most

predominantly of CCL7, and also of CCL2 and CCL5 and CCL8.

**Cellular Location** Secreted.

**Tissue Location** Highest expression found in the small intestine and peripheral blood cells.

Intermediate levels seen in the heart, placenta, lung, skeletal muscle, thymus, colon, ovary, spinal cord and pancreas. Low levels seen in the brain, liver,

spleen and prostate
