Protein Information

Name FAS

Synonyms APT1, FAS1, TNFRSF6

Function Receptor for TNFSF6/FASLG. The adapter molecule FADD recruits caspase

CASP8 to the activated receptor. The resulting death-inducing signaling complex (DISC) performs CASP8 proteolytic activation which initiates the subsequent cascade of caspases (aspartate-specific cysteine proteases) mediating apoptosis. FAS-mediated apoptosis may have a role in the

induction of peripheral tolerance, in the antigen- stimulated suicide of mature T-cells, or both. The secreted isoforms 2 to 6 block apoptosis (in vitro).

Cellular Location [Isoform 1]: Cell membrane; Single-pass type I membrane protein. Membrane

raft [Isoform 3]: Secreted. [Isoform 5]: Secreted.

Tissue Location Isoform 1 and isoform 6 are expressed at equal levels in resting peripheral

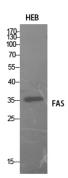

blood mononuclear cells. After activation there is an increase in isoform 1 and

decrease in the levels of isoform 6.
