

# IMPDH2 Antibody (N-term)

Purified Rabbit Polyclonal Antibody (Pab) Catalog # AP7390a

## **Product Information**

**Application** WB, IHC-P, FC, E

Primary Accession P12268

Other Accession <u>E9PU28</u>, <u>P24547</u>, <u>P12269</u>

Reactivity Human, Mouse **Predicted** Hamster, Rat Host Rabbit Clonality Polyclonal Isotype Rabbit IgG **Clone Names** RB19382 **Calculated MW** 55805 108-137 **Antigen Region** 

## **Additional Information**

**Gene ID** 3615

Other Names Inosine-5'-monophosphate dehydrogenase 2

{ECO:0000255|HAMAP-Rule:MF\_03156}, IMP dehydrogenase 2

{ECO:0000255 | HAMAP-Rule:MF\_03156}, IMPD 2 {ECO:0000255 | HAMAP-Rule:MF\_03156}, IMPDH 2 {ECO:0000255 | HAMAP-Rule:MF\_03156}, 111205

{ECO:0000255 | HAMAP-Rule:MF\_03156}, IMPDH-II, IMPDH2

{ECO:0000255 | HAMAP-Rule:MF\_03156}, IMPD2

**Target/Specificity** This IMPDH2 antibody is generated from rabbits immunized with a KLH

conjugated synthetic peptide between 108-137 amino acids from the

N-terminal region of human IMPDH2.

Dilution WB~~1:1000 IHC-P~~1:100~500 FC~~1:10~50 E~~Use at an assay dependent

concentration.

**Format** Purified polyclonal antibody supplied in PBS with 0.09% (W/V) sodium azide.

This antibody is prepared by Saturated Ammonium Sulfate (SAS) precipitation

followed by dialysis against PBS.

**Storage** Maintain refrigerated at 2-8°C for up to 2 weeks. For long term storage store

at -20°C in small aliquots to prevent freeze-thaw cycles.

**Precautions** IMPDH2 Antibody (N-term) is for research use only and not for use in

diagnostic or therapeutic procedures.

#### **Protein Information**

Name IMPDH2 ( HGNC:6053)

Synonyms IMPD2

**Function** Catalyzes the conversion of inosine 5'-phosphate (IMP) to xanthosine

5'-phosphate (XMP), the first committed and rate-limiting step in the de novo synthesis of guanine nucleotides, and therefore plays an important role in the regulation of cell growth (PubMed:7763314, PubMed:7903306). Could also have a single-stranded nucleic acid-binding activity and could play a role in RNA and/or DNA metabolism (PubMed:14766016). It may also have a role in the development of malignancy and the growth progression of some tumors.

**Cellular Location** Cytoplasm. Nucleus. Cytoplasm, cytosol. Note=Can form fiber-like subcellular

structures termed 'cytoophidia' in response to intracellular guanine-

nucleotide depletion.

**Tissue Location** IMPDH1 is the main species in normal leukocytes and IMPDH2 predominates

over IMPDH1 in the tumor

## **Background**

IMPDH2 is the rate-limiting enzyme in the de novo guanine nucleotide biosynthesis. It is thus involved in maintaining cellular guanine deoxy- and ribonucleotide pools needed for DNA and RNA synthesis. The protein catalyzes the NAD-dependent oxidation of inosine-5'-monophosphate into xanthine-5'-monophosphate, which is then converted into guanosine-5'-monophosphate. Its gene is up-regulated in some neoplasms, suggesting it may play a role in malignant transformation.
