Protein Information

Name CYCS

Synonyms CYC

Function Electron carrier protein. The oxidized form of the cytochrome c heme group

can accept an electron from the heme group of the cytochrome c1 subunit of cytochrome reductase. Cytochrome c then transfers this electron to the cytochrome oxidase complex, the final protein carrier in the mitochondrial

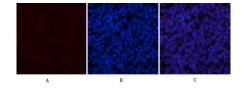

electron-transport chain.

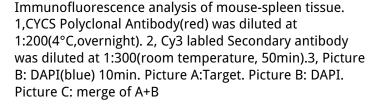

Cellular Location Mitochondrion intermembrane space. Note=Loosely associated with the inner

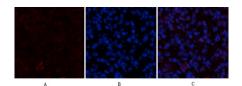

membrane

Background

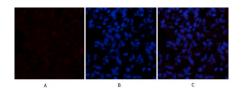

Electron carrier protein. The oxidized form of the cytochrome c heme group can accept an electron from the heme group of the cytochrome c1 subunit of cytochrome reductase. Cytochrome c then transfers this electron to the cytochrome oxidase complex, the final protein carrier in the mitochondrial electron-transport chain.
