IL-17F Polyclonal Antibody

Catalog # AP74230

Product Information

Application IHC-P
Primary Accession Q96PD4
Reactivity Human
Host Rabbit
Clonality Polyclonal
Calculated MW 18045

Additional Information

Gene ID 112744

Other Names Interleukin-17F (IL-17F) (Cytokine ML-1) (Interleukin-24) (IL-24)

Dilution IHC-P~~IHC-p 1:50-200, ELISA 1:10000-20000

Format Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.09% (W/V) sodium

azide.

Storage Conditions -20°C

Protein Information

Name IL17F

Function Effector cytokine of innate and adaptive immune system involved in

antimicrobial host defense and maintenance of tissue integrity

(PubMed: 21350122). IL17A-IL17F signals via IL17RA-IL17RC heterodimeric receptor complex, triggering homotypic interaction of IL17RA and IL17RC chains with TRAF3IP2 adapter through SEFIR domains. This leads to downstream TRAF6-mediated activation of NF-kappa-B and MAPkinase pathways ultimately resulting in transcriptional activation of cytokines, chemokines, antimicrobial peptides and matrix metalloproteinases, with

potential strong immune inflammation (PubMed: 11574464, PubMed: 11591732, PubMed: 11591768, PubMed: 17911633,

PubMed:18684971, PubMed:21350122, PubMed:28827714). IL17A-IL17F is primarily involved in host defense against extracellular bacteria and fungi by inducing neutrophilic inflammation (By similarity). As signature effector cytokine of T-helper 17 cells (Th17), primarily induces neutrophil activation and recruitment at infection and inflammatory sites (By similarity). Stimulates the production of antimicrobial beta-defensins DEFB1, DEFB103A, and DEFB104A by mucosal epithelial cells, limiting the entry of microbes through the epithelial barriers (By similarity). IL17F homodimer can signal via IL17RC homodimeric receptor complex, triggering downstream activation of TRAF6

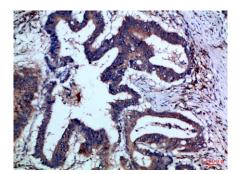

and NF-kappa-B signaling pathway (PubMed:32187518). Via IL17RC induces transcriptional activation of IL33, a potent cytokine that stimulates group 2 innate lymphoid cells and adaptive T-helper 2 cells involved in pulmonary allergic response to fungi. Likely via IL17RC, promotes sympathetic innervation of peripheral organs by coordinating the communication between gamma-delta T cells and parenchymal cells. Stimulates sympathetic innervation of thermogenic adipose tissue by driving TGFB1 expression (By similarity). Regulates the composition of intestinal microbiota and immune tolerance by inducing antimicrobial proteins that specifically control the growth of commensal Firmicutes and Bacteroidetes (By similarity).

Cellular Location Secreted {ECO:0000250 | UniProtKB:Q7TNI7}.

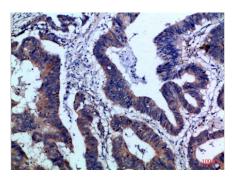

Tissue Location Expressed in T-helper 1 and T-helper 2 cells, basophils and mast cells.
