Protein Information

Name	IL11 {ECO:0000312 MGI:MGI:107613}
Function	Cytokine that stimulates the proliferation of hematopoietic stem cells and megakaryocyte progenitor cells and induces megakaryocyte maturation resulting in increased platelet production (PubMed: 8913282). Also promotes the proliferation of hepatocytes in response to liver damage (PubMed: 22253262). Binding to its receptor formed by IL6ST and either IL11RA1 or IL11RA2 activates a signaling cascade that promotes cell proliferation, also in the context of various cancers (PubMed: 10026196 , PubMed: 23948300). Signaling leads to the activation of intracellular protein kinases and the phosphorylation of STAT3 (PubMed: 22253262 , PubMed: 23948300). The interaction with the membrane- bound IL11RA and IL6ST stimulates 'classic signaling', whereas the binding of IL11 and soluble IL11RA to IL6ST stimulates 'trans- signaling' (By similarity).
Cellular Location	Secreted.
