

# Caspase 3 Rabbit mAb

Catalog # AP74932

## **Product Information**

| Application       | WB, IHC-P, IP       |
|-------------------|---------------------|
| Primary Accession | <u>P42574</u>       |
| Reactivity        | Human, Mouse        |
| Host              | Rabbit              |
| Clonality         | Monoclonal Antibody |
| Calculated MW     | 31608               |

#### **Additional Information**

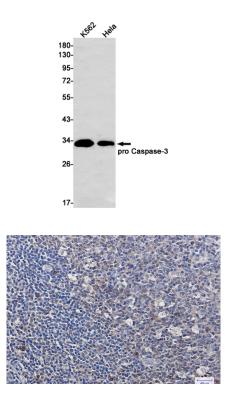

| Gene ID     | 836                                                                                      |
|-------------|------------------------------------------------------------------------------------------|
| Other Names | CASP3                                                                                    |
| Dilution    | WB~~1/500-1/1000 IHC-P~~N/A IP~~N/A                                                      |
| Format      | 50mM Tris-Glycine(pH 7.4), 0.15M NaCl, 40%Glycerol, 0.01% sodium azide and 0.05% BSA.    |
| Storage     | Store at 4°C short term. Aliquot and store at -20°C long term. Avoid freeze/thaw cycles. |

## **Protein Information**

| Name     | CASP3                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

| Synonyms | CPP32 {ECO:0000303 PubMed:7983002}                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| Function | Thiol protease that acts as a major effector caspase involved in the execution phase of apoptosis (PubMed: <u>18723680</u> , PubMed: <u>20566630</u> , PubMed: <u>23650375</u> , PubMed: <u>35338844</u> , PubMed: <u>35446120</u> , PubMed: <u>7596430</u> ). Following cleavage and activation by initiator caspases (CASP8, CASP9 and/or CASP10), mediates execution of apoptosis by catalyzing cleavage of many proteins (PubMed: <u>18723680</u> , PubMed: <u>20566630</u> , PubMed: <u>23650375</u> , PubMed: <u>7596430</u> ). At the onset of apoptosis, it proteolytically cleaves poly(ADP-ribose) polymerase PARP1 at a '216-Asp- -Gly-217' bond (PubMed: <u>10497198</u> , PubMed: <u>16374543</u> , PubMed: <u>7596430</u> , PubMed: <u>7774019</u> ). Cleaves and activates sterol regulatory element binding proteins (SREBPs) between the basic helix-loop-helix leucine zipper domain and the membrane attachment domain (By similarity). Cleaves and activates caspase-6, -7 and -9 (CASP6, CASP7 and CASP9, respectively) (PubMed: <u>7596430</u> ). Cleaves and inactivates interleukin-18 (IL18) (PubMed: <u>37993714</u> , PubMed: <u>9334240</u> ). Involved in the cleavage of huntingtin (PubMed: <u>8696339</u> ). Triggers cell adhesion in sympathetic neurons through |

|                   | RET cleavage (PubMed: <u>21357690</u> ). Cleaves and inhibits<br>serine/threonine-protein kinase AKT1 in response to oxidative stress<br>(PubMed: <u>23152800</u> ). Acts as an inhibitor of type I interferon production<br>during virus-induced apoptosis by mediating cleavage of antiviral proteins<br>CGAS, IRF3 and MAVS, thereby preventing cytokine overproduction<br>(PubMed: <u>30878284</u> ). Also involved in pyroptosis by mediating cleavage and<br>activation of gasdermin-E (GSDME) (PubMed: <u>35338844</u> , PubMed: <u>35446120</u> ).<br>Cleaves XRCC4 and phospholipid scramblase proteins XKR4, XKR8 and XKR9,<br>leading to promote phosphatidylserine exposure on apoptotic cell surface<br>(PubMed: <u>23845944</u> , PubMed: <u>33725486</u> ). Cleaves BIRC6 following inhibition of<br>BIRC6-caspase binding by DIABLO/SMAC (PubMed: <u>36758104</u> ,<br>PubMed: <u>36758106</u> ). |

| Cellular Location | Cytoplasm.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| Tissue Location   | Highly expressed in lung, spleen, heart, liver and kidney. Moderate levels in<br>brain and skeletal muscle, and low in testis. Also found in many cell lines,<br>highest expression in cells of the immune system.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
