

# Phospho-MSK1 (Ser376) Rabbit mAb

Catalog # AP75742

## **Product Information**

| Application       | WB, IHC-P, IP       |
|-------------------|---------------------|
| Primary Accession | <u>075582</u>       |
| Reactivity        | Human, Rat          |
| Host              | Rabbit              |
| Clonality         | Monoclonal Antibody |
| Calculated MW     | 89865               |

#### **Additional Information**

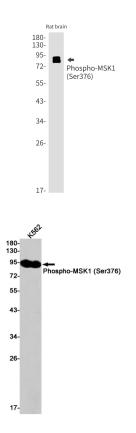

| Gene ID     | 9252                                                                                  |
|-------------|---------------------------------------------------------------------------------------|
| Other Names | RPS6KA5                                                                               |
| Dilution    | WB~~1/500-1/1000 IHC-P~~N/A IP~~1/20                                                  |
| Format      | 50mM Tris-Glycine(pH 7.4), 0.15M NaCl, 40%Glycerol, 0.01% sodium azide and 0.05% BSA. |

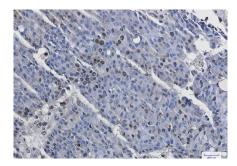

### **Protein Information**

| Name     | RPS6KA5                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

| Synonyms | MSK1                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| Function | Serine/threonine-protein kinase that is required for the mitogen or<br>stress-induced phosphorylation of the transcription factors CREB1 and ATF1<br>and for the regulation of the transcription factors RELA, STAT3 and ETV1/ER81,<br>and that contributes to gene activation by histone phosphorylation and<br>functions in the regulation of inflammatory genes (PubMed: <u>11909979</u> ,<br>PubMed: <u>12569367</u> , PubMed: <u>12763138</u> , PubMed: <u>18511904</u> , PubMed: <u>9687510</u> ,<br>PubMed: <u>9873047</u> ). Phosphorylates CREB1 and ATF1 in response to mitogenic<br>or stress stimuli such as UV-C irradiation, epidermal growth factor (EGF) and<br>anisomycin (PubMed: <u>11909979</u> , PubMed: <u>9873047</u> ). Plays an essential role in<br>the control of RELA transcriptional activity in response to TNF and upon<br>glucocorticoid, associates in the cytoplasm with the glucocorticoid receptor<br>NR3C1 and contributes to RELA inhibition and repression of inflammatory<br>gene expression (PubMed: <u>12628924</u> , PubMed: <u>18511904</u> ). In skeletal<br>myoblasts is required for phosphorylation of RELA at 'Ser-276' during<br>oxidative stress (PubMed: <u>12628924</u> ). In erythropoietin-stimulated cells, is<br>necessary for the 'Ser-727' phosphorylation of STAT3 and regulation of its<br>transcriptional potential (PubMed: <u>12763138</u> ). Phosphorylates ETV1/ER81 at<br>'Ser-191' and 'Ser-216', and thereby regulates its ability to stimulate<br>transcription, which may be important during development and breast tumor |

|                   | formation (PubMed:12569367). Directly represses transcription via<br>phosphorylation of 'Ser-1' of histone H2A (PubMed:15010469).<br>Phosphorylates 'Ser-10' of histone H3 in response to mitogenics, stress stimuli<br>and EGF, which results in the transcriptional activation of several immediate<br>early genes, including proto-oncogenes c-fos/FOS and c-jun/JUN<br>(PubMed:12773393). May also phosphorylate 'Ser-28' of histone H3<br>(PubMed:12773393). Mediates the mitogen- and stress-induced<br>phosphorylation of high mobility group protein 1 (HMGN1/HMG14)<br>(PubMed:12773393). In lipopolysaccharide-stimulated primary macrophages,<br>acts downstream of the Toll-like receptor TLR4 to limit the production of<br>pro-inflammatory cytokines (By similarity). Functions probably by inducing<br>transcription of the MAP kinase phosphatase DUSP1 and the<br>anti-inflammatory cytokine interleukin 10 (IL10), via CREB1 and ATF1<br>transcription factors (By similarity). Plays a role in neuronal cell death by<br>mediating the downstream effects of excitotoxic injury (By similarity).<br>Phosphorylates TRIM7 at 'Ser-107' in response to growth factor signaling via<br>the MEK/ERK pathway, thereby stimulating its ubiquitin ligase activity<br>(PubMed:25851810). |

| Cellular Location | Nucleus. Cytoplasm. Note=Predominantly nuclear. Exported into cytoplasm in response to glucocorticoid                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| Tissue Location   | Widely expressed with high levels in heart, brain and placenta. Less abundant<br>in lung, kidney and liver                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
