

AXL Antibody (C-term)

Purified Rabbit Polyclonal Antibody (Pab) Catalog # AP7602b

Product Information

Application WB, IHC-P, E **Primary Accession** P30530 Reactivity Human Host Rabbit Clonality Polyclonal Isotype Rabbit IgG **Calculated MW** 98337 **Antigen Region** 863-894

Additional Information

Gene ID 558

Other Names Tyrosine-protein kinase receptor UFO, AXL oncogene, AXL, UFO

Target/Specificity This AXL antibody is generated from rabbits immunized with a KLH

conjugated synthetic peptide between 863-894 amino acids from the

C-terminal region of human AXL.

Dilution WB~~1:1000 IHC-P~~1:100~500 E~~Use at an assay dependent concentration.

Format Purified polyclonal antibody supplied in PBS with 0.09% (W/V) sodium azide.

This antibody is prepared by Saturated Ammonium Sulfate (SAS) precipitation

followed by dialysis against PBS.

Storage Maintain refrigerated at 2-8°C for up to 2 weeks. For long term storage store

at -20°C in small aliquots to prevent freeze-thaw cycles.

Precautions AXL Antibody (C-term) is for research use only and not for use in diagnostic or

therapeutic procedures.

Protein Information

Name AXL

Synonyms UFO

Function Receptor tyrosine kinase that transduces signals from the extracellular

matrix into the cytoplasm by binding growth factor GAS6 and which is thus

regulating many physiological processes including cell survival, cell

proliferation, migration and differentiation. Ligand binding at the cell surface

induces dimerization and autophosphorylation of AXL. Following activation by ligand, AXL binds and induces tyrosine phosphorylation of PI3-kinase subunits PIK3R1, PIK3R2 and PIK3R3; but also GRB2, PLCG1, LCK and PTPN11. Other downstream substrate candidates for AXL are CBL, NCK2, SOCS1 and TNS2. Recruitment of GRB2 and phosphatidylinositol 3 kinase regulatory subunits by AXL leads to the downstream activation of the AKT kinase. GAS6/AXL signaling plays a role in various processes such as endothelial cell survival during acidification by preventing apoptosis, optimal cytokine signaling during human natural killer cell development, hepatic regeneration, gonadotropin-releasing hormone neuron survival and migration, platelet activation, or regulation of thrombotic responses. Also plays an important role in inhibition of Toll-like receptors (TLRs)-mediated innate immune response.

Cellular Location Cell membrane; Single-pass type I membrane protein

Tissue Location Highly expressed in metastatic colon tumors. Expressed in primary colon

tumors. Weakly expressed in normal colon tissue.

Background

AXL, a member of the AXL/UFO subfamily of Tyr protein kinases, may function as a signal transducer between specific cell types of mesodermal origin. This Type I membrane protein has transforming potential in patients with chronic myeloproliferative disorder or chronic myelocytic leukemia. The protein contains 2 putative fibronectin type III domains and 2 putative immunoglobulin-like C2-type domains.

Images

Western blot analysis of anti-AXL C-term Pab (Cat. #AP7602b) in SKBR3 cell lysate. AXL (arrow) was detected using purified Pab. Secondary HRP-anti-rabbit was used for signal visualization with chemiluminescence.

Formalin-fixed and paraffin-embedded human cancer tissue reacted with the primary antibody, which was peroxidase-conjugated to the secondary antibody, followed by DAB staining. This data demonstrates the use of this antibody for immunohistochemistry; clinical relevance has not been evaluated. BC = breast carcinoma; HC = hepatocarcinoma.
