## Protein Information

---

<b>Name</b>	TCEA1
<b>Synonyms</b>	GTF2S, TFIIS
<b>Function</b>	Necessary for efficient RNA polymerase II transcription elongation past template-encoded arresting sites. The arresting sites in DNA have the property of trapping a certain fraction of elongating RNA polymerases that pass through, resulting in locked ternary complexes. Cleavage of the nascent transcript by S-II allows the resumption of elongation from the new 3'-terminus.
<b>Cellular Location</b>	Nucleus.
