

# YB1 Rabbit mAb

Catalog # AP76767

## Product Information

---

Application	WB, IHC-P, IHC-F, IP, ICC
Primary Accession	<a href="#">P67809</a>
Reactivity	Human, Mouse
Host	Rabbit
Clonality	Monoclonal Antibody
Calculated MW	35924

## Additional Information

---

Gene ID	4904
Other Names	YBX1
Dilution	WB~~1/500-1/1000 IHC-P~~N/A IHC-F~~N/A IP~~1/20 ICC~~N/A
Format	50mM Tris-Glycine(pH 7.4), 0.15M NaCl, 40%Glycerol, 0.01% sodium azide and 0.05% BSA.
Storage	Store at 4°C short term. Aliquot and store at -20°C long term. Avoid freeze/thaw cycles.

## Protein Information

---

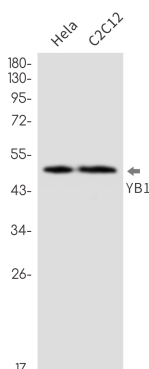

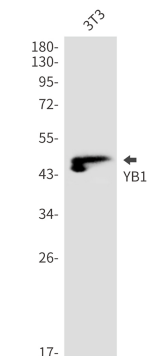

Name	YBX1 ( <a href="#">HGNC:8014</a> )
Function	DNA- and RNA-binding protein involved in various processes, such as translational repression, RNA stabilization, mRNA splicing, DNA repair and transcription regulation (PubMed: <a href="#">10817758</a> , PubMed: <a href="#">11698476</a> , PubMed: <a href="#">14718551</a> , PubMed: <a href="#">18809583</a> , PubMed: <a href="#">31358969</a> , PubMed: <a href="#">8188694</a> ). Predominantly acts as a RNA-binding protein: binds preferentially to the 5'-[CU]CUGCG-3' RNA motif and specifically recognizes mRNA transcripts modified by C5-methylcytosine (m5C) (PubMed: <a href="#">19561594</a> , PubMed: <a href="#">31358969</a> ). Promotes mRNA stabilization: acts by binding to m5C-containing mRNAs and recruiting the mRNA stability maintainer ELAVL1, thereby preventing mRNA decay (PubMed: <a href="#">10817758</a> , PubMed: <a href="#">11698476</a> , PubMed: <a href="#">31358969</a> ). Component of the CRD-mediated complex that promotes MYC mRNA stability (PubMed: <a href="#">19029303</a> ). Contributes to the regulation of translation by modulating the interaction between the mRNA and eukaryotic initiation factors (By similarity). Plays a key role in RNA composition of extracellular exosomes by defining the sorting of small non-coding RNAs, such as tRNAs, Y RNAs, Vault RNAs and miRNAs (PubMed: <a href="#">27559612</a> , PubMed: <a href="#">29073095</a> ). Probably sorts RNAs in exosomes by recognizing and binding C5-methylcytosine (m5C)-containing RNAs (PubMed: <a href="#">28341602</a> ,

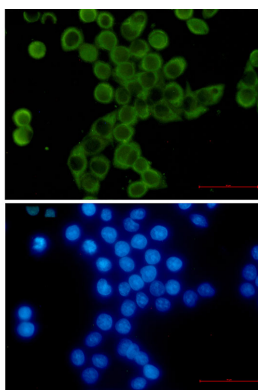

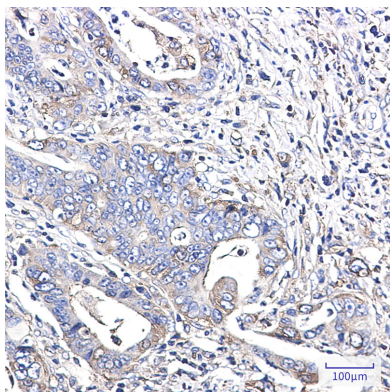

PubMed:[29073095](#)). Acts as a key effector of epidermal progenitors by preventing epidermal progenitor senescence: acts by regulating the translation of a senescence-associated subset of cytokine mRNAs, possibly by binding to m5C-containing mRNAs (PubMed:[29712925](#)). Also involved in pre-mRNA alternative splicing regulation: binds to splice sites in pre-mRNA and regulates splice site selection (PubMed:[12604611](#)). Binds to TSC22D1 transcripts, thereby inhibiting their translation and negatively regulating TGF-beta- mediated transcription of COL1A2 (By similarity). Also able to bind DNA: regulates transcription of the multidrug resistance gene MDR1 is enhanced in presence of the APEX1 acetylated form at 'Lys-6' and 'Lys- 7' (PubMed:[18809583](#)). Binds to promoters that contain a Y-box (5'-CTGATTGGCCAA-3'), such as MDR1 and HLA class II genes (PubMed:[18809583](#), PubMed:[8188694](#)). Promotes separation of DNA strands that contain mismatches or are modified by cisplatin (PubMed:[14718551](#)). Has endonucleolytic activity and can introduce nicks or breaks into double-stranded DNA, suggesting a role in DNA repair (PubMed:[14718551](#)). The secreted form acts as an extracellular mitogen and stimulates cell migration and proliferation (PubMed:[19483673](#)).

## Cellular Location

Cytoplasm. Nucleus. Cytoplasmic granule. Secreted. Secreted, extracellular exosome. Cytoplasm, P-body {ECO:0000250|UniProtKB:P62960}. Note=Predominantly cytoplasmic in proliferating cells (PubMed:[12604611](#)). Cytotoxic stress and DNA damage enhance translocation to the nucleus (PubMed:[14718551](#)) Localized in cytoplasmic mRNP granules containing untranslated mRNAs (PubMed:[25229427](#)). Shuttles between nucleus and cytoplasm (PubMed:[25229427](#)). Localized with DDX1, MBNL1 and TIAL1 in stress granules upon stress (PubMed:[18335541](#)). Secreted by mesangial and monocytic cells after inflammatory challenges (PubMed:[19483673](#))
