

# Phospho-Histone H2A.X (Ser139) Rabbit mAb

Catalog # AP76855

### **Product Information**

Application WB, IP Primary Accession P16104

**Reactivity** Human, Mouse, Rat

**Host** Rabbit

**Clonality** Monoclonal Antibody

Calculated MW 15145

## **Additional Information**

**Gene ID** 3014

Other Names H2AX

**Dilution** WB~~1/500-1/1000 IP~~1/20

Format Liquid

#### **Protein Information**

Name H2AX (HGNC:4739)

**Function** Variant histone H2A which replaces conventional H2A in a subset of

nucleosomes. Nucleosomes wrap and compact DNA into chromatin, limiting

DNA accessibility to the cellular machineries which require DNA as a

template. Histones thereby play a central role in transcription regulation, DNA repair, DNA replication and chromosomal stability. DNA accessibility is regulated via a complex set of post- translational modifications of histones,

also called histone code, and nucleosome remodeling. Required for

checkpoint-mediated arrest of cell cycle progression in response to low doses of ionizing radiation and for efficient repair of DNA double strand breaks

(DSBs) specifically when modified by C-terminal phosphorylation.

**Cellular Location** Nucleus. Chromosome
