

12 Lipoxygenase Rabbit mAb

Catalog # AP77032

Product Information

ApplicationWBPrimary AccessionP18054ReactivityRat, HumanHostRabbit

Clonality Monoclonal Antibody

Isotype IgG

Conjugate Unconjugated

Immunogen A synthesized peptide derived from human LOX12

Purification Affinity Purified

Calculated MW 75694

Additional Information

Gene ID 239

Other Names ALOX12

Dilution WB~~1/500-1/1000

Format Liquid in 10mM PBS, pH 7.4, 150mM sodium chloride, 0.05% BSA, 0.02%

sodium azide and 50% glycerol.

Storage Store at 4°C short term. Aliquot and store at -20°C long term. Avoid

freeze/thaw cycles.

Protein Information

Name ALOX12 (<u>HGNC:429</u>)

Synonyms 12LO, LOG12

Function Catalyzes the regio and stereo-specific incorporation of molecular oxygen

into free and esterified polyunsaturated fatty acids generating lipid hydroperoxides that can be further reduced to the corresponding hydroxy

species (PubMed: 17493578, PubMed: 18311922, PubMed: 1851637,

PubMed:<u>32404334</u>, PubMed:<u>8319693</u>, PubMed:<u>8500694</u>). Mainly converts arachidonate ((5Z,8Z,11Z,14Z)-eicosatetraenoate) to the specific bioactive lipid

(12S)-hydroperoxyeicosatetraenoate/(12S)-HPETE (PubMed: 17493578,

PubMed: 22984144, PubMed: 24282679, PubMed: 8319693, PubMed: 8500694). Through the production of bioactive lipids like (12S)- HPETE it regulates different biological processes including platelet activation (PubMed: 8319693, PubMed: 8500694). It can also catalyze the epoxidation of double bonds of

polyunsaturated fatty acids such as

(14S)-hydroperoxy-docosahexaenoate/(14S)-HPDHA resulting in the formation of (13S,14S)-epoxy-DHA (PubMed:23504711). Furthermore, it may participate in the sequential oxidations of DHA

((4Z,7Z,10Z,13Z,16Z,19Z)-docosahexaenoate) to generate specialized proresolving mediators (SPMs) like resolvin D5 ((7S,17S)-diHPDHA) and (7S,14S)-diHPDHA, that actively down-regulate the immune response and have anti-aggregation properties with platelets (PubMed: 32404334). An additional function involves a multistep process by which it transforms leukotriene A4/LTA4 into the bioactive lipids lipoxin A4/LXA4 and lipoxin B4/LXB4, both are vasoactive and LXA4 may regulate neutrophil function via occupancy of specific recognition sites (PubMed:8250832). Can also peroxidize linoleate ((9Z,12Z)-octadecadienoate) to (13S)hydroperoxyoctadecadienoate/ (13S-HPODE) (By similarity). Due to its role in regulating both the expression of the vascular endothelial growth factor (VEGF, an angiogenic factor involved in the survival and metastasis of solid tumors) and the expression of integrin beta-1 (known to affect tumor cell migration and proliferation), it can be regarded as protumorigenic (PubMed:16638750, PubMed:22237009, PubMed:9751607). Important for cell survival, as it may play a role not only in proliferation but also in the

Cellular Location

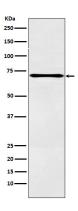

Cytoplasm, cytosol. Membrane. Note=Membrane association is stimulated by EGF

prevention of apoptosis in vascular smooth muscle cells (PubMed: 23578768).

Tissue Location

Expressed in vascular smooth muscle cells.
