ATP1B1 Rabbit mAb

Catalog # AP77049

Product Information

Application	WB, IHC-P
Primary Accession	P05026
Reactivity	Rat, Human, Mouse
Host	Rabbit
Clonality	Monoclonal Antibody
Isotype	IgG
Conjugate	Unconjugated
Immunogen	A synthesized peptide derived from human ATP1B1
Purification	Affinity Purified
Calculated MW	35061

Additional Information

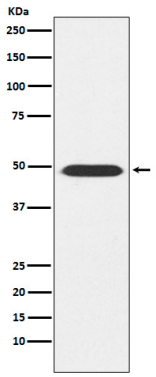

Gene ID	481
Other Names	ATP1B1
Dilution	WB~~1/500-1/1000 IHC-P~~N/A
Format	Liquid in 10mM PBS, pH 7.4, 150mM sodium chloride, 0.05% BSA, 0.02% sodium azide and 50% glycerol.
Storage	Store at 4°C short term. Aliquot and store at -20°C long term. Avoid freeze/thaw cycles.

Protein Information

Name	ATP1B1 (HGNC:804)
Synonyms	ATP1B
Function	Non-catalytic subunit of the Na(+)/K(+)-ATPase pump that hydrolyzes ATP to exchange ions across the plasma membrane, exporting 3 Na(+) and importing 2 K(+) per cycle against electrochemical gradients. The beta subunit is important for the folding, stability, and targeting of the Na(+)/K(+)-ATPase pump to the plasma membranes (By similarity). In addition, acts as a homotypic cell adhesion molecule in epithelia cells. Interactions between ATP1B1 on neighboring cells are critical for proper lateral polarization of the Na(+)/K(+)-ATPase pump and for stabilizing cell-cell adhesion (By similarity). Plays a role in innate immunity by enhancing virus-triggered induction of interferons (IFNs) and interferon stimulated genes (ISGs). Mechanistically, enhances the ubiquitination of TRAF3 and TRAF6 as well as the phosphorylation of TAK1 and TBK1 (PubMed:34011520).

Cellular Location	Cell membrane; Single-pass type II membrane protein {ECO:0000250|UniProtKB:P05027} Apical cell membrane {ECO:0000250|UniProtKB:P07340}; Single-pass type II membrane protein {ECO:0000250|UniProtKB:P05027}. Cell membrane, sarcolemma {ECO:0000250|UniProtKB:P14094}. Note=Colocalizes with OBSCN at the intercalated disk and sarcolemma in cardiomyocytes. Localizes in long striations at the level of Z and M lines {ECO:0000250|UniProtKB:P14094}
Tissue Location	Found in most tissues.
