

# p53 Rabbit mAb

Catalog # AP77418

## **Product Information**

| Application       | WB, IHC-P, IP, ICC  |
|-------------------|---------------------|
| Primary Accession | <u>P04637</u>       |
| Reactivity        | Human               |
| Host              | Rabbit              |
| Clonality         | Monoclonal Antibody |
| Calculated MW     | 43653               |

#### **Additional Information**

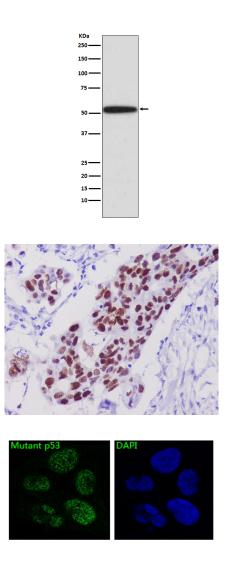

| Gene ID     | 7157  |
|-------------|---|
| Other Names | TP53  |
| Dilution    | WB~~1/500-1/1000 IHC-P~~N/A IP~~N/A ICC~~N/A  |
| Format      | 10mM PBS, pH 7.4, 150mM sodium chloride, 0.05% BSA, 0.02% sodium azide<br>and 50% glycerol. |

## **Protein Information**

| Name     | TP53   |
|----------|--|
| Synonyms | P53  |
| Function | Multifunctional transcription factor that induces cell cycle arrest, DNA repair<br>or apoptosis upon binding to its target DNA sequence (PubMed: <u>11025664</u> ,<br>PubMed: <u>12524540</u> , PubMed: <u>12810724</u> , PubMed: <u>15186775</u> ,<br>PubMed: <u>15340061</u> , PubMed: <u>17317671</u> , PubMed: <u>17349958</u> ,<br>PubMed: <u>19556538</u> , PubMed: <u>20673990</u> , PubMed: <u>20959462</u> ,<br>PubMed: <u>22726440</u> , PubMed: <u>24051492</u> , PubMed: <u>24652652</u> ,<br>PubMed: <u>35618207</u> , PubMed: <u>36634798</u> , PubMed: <u>38653238</u> ,<br>PubMed: <u>9840937</u> ). Acts as a tumor suppressor in many tumor types; induces<br>growth arrest or apoptosis depending on the physiological circumstances and<br>cell type (PubMed: <u>11025664</u> , PubMed: <u>12524540</u> , PubMed: <u>12810724</u> ,<br>PubMed: <u>15186775</u> , PubMed: <u>15340061</u> , PubMed: <u>17189187</u> ,<br>PubMed: <u>15186775</u> , PubMed: <u>17349958</u> , PubMed: <u>19556538</u> ,<br>PubMed: <u>20673990</u> , PubMed: <u>20959462</u> , PubMed: <u>22726440</u> ,<br>PubMed: <u>24051492</u> , PubMed: <u>24652652</u> , PubMed: <u>38653238</u> ,<br>PubMed: <u>9840937</u> ). Negatively regulates cell division by controlling expression<br>of a set of genes required for this process (PubMed: <u>11025664</u> ,<br>PubMed: <u>12524540</u> , PubMed: <u>12810724</u> , PubMed: <u>15186775</u> ,<br>PubMed: <u>15340061</u> , PubMed: <u>17317671</u> , PubMed: <u>15186775</u> ,<br>PubMed: <u>15340061</u> , PubMed: <u>17317671</u> , PubMed: <u>15340958</u> ,<br>PubMed: <u>1556538</u> , PubMed: <u>1025664</u> ,<br>PubMed: <u>15340061</u> , PubMed: <u>17317671</u> , PubMed: <u>17349958</u> ,<br>PubMed: <u>1556538</u> , PubMed: <u>20673990</u> , PubMed: <u>20959462</u> , |

|                   | PubMed:22726440, PubMed:24051492, PubMed:24652652,<br>PubMed:9840937). One of the activated genes is an inhibitor of<br>cyclin-dependent kinases. Apoptosis induction seems to be mediated either<br>by stimulation of BAX and FAS antigen expression, or by repression of Bcl-2<br>expression (PubMed:12524540, PubMed:17189187). Its pro-apoptotic activity<br>is activated via its interaction with PPP1R13B/ASPP1 or TP53BP2/ASPP2<br>(PubMed:12524540). However, this activity is inhibited when the interaction<br>with PPP1R13B/ASPP1 or TP53BP2/ASPP2 is displaced by PPP1R13L/iASPP<br>(PubMed:12524540). In cooperation with mitochondrial PPIF is involved in<br>activating oxidative stress-induced necrosis; the function is largely<br>independent of transcription. Induces the transcription of long intergenic<br>non-coding RNA p21 (lincRNA-p21) and lincRNA-Mkln1. LincRNA-p21<br>participates in TP53-dependent transcriptional repression leading to<br>apoptosis and seems to have an effect on cell-cycle regulation. Implicated in<br>Notch signaling cross-over. Prevents CDK7 kinase activity when associated to<br>CAK complex in response to DNA damage, thus stopping cell cycle<br>progression. Isoform 2 enhances the transactivation activity of isoform 1 from<br>some but not all TP53-inducible promoters. Isoform 4 suppresses<br>transactivation activity and impairs growth suppression mediated by isoform<br>1. Isoform 7 inhibits isoform 1-mediated apoptosis. Regulates the circadian<br>clock by repressing CLOCK-BMAL1-mediated transcriptional activation of PER2<br>(PubMed:24051492). |
|-------------------|--|
| Cellular Location | Cytoplasm. Nucleus. Nucleus, PML body. Endoplasmic reticulum.<br>Mitochondrion matrix. Cytoplasm, cytoskeleton, microtubule organizing<br>center, centrosome Note=Recruited into PML bodies together with CHEK2<br>(PubMed:12810724) Translocates to mitochondria upon oxidative stress<br>(PubMed:22726440) Translocates to mitochondria in response to mitomycin C<br>treatment (PubMed:27323408). Competitive inhibition of TP53 interaction<br>with HSPA9/MOT-2 by UBXN2A results in increased protein abundance and<br>subsequent translocation of TP53 to the nucleus (PubMed:24625977) [Isoform<br>2]: Nucleus. Cytoplasm. Note=Localized mainly in the nucleus with minor<br>staining in the cytoplasm [Isoform 4]: Nucleus. Cytoplasm.<br>Note=Predominantly nuclear but translocates to the cytoplasm following cell<br>stress [Isoform 8]: Nucleus. Cytoplasm. Note=Localized in both nucleus and<br>cytoplasm in most cells. In some cells, forms foci in the nucleus that are<br>different from nucleoli  |
| Tissue Location   | Ubiquitous. Isoforms are expressed in a wide range of normal tissues but in a tissue-dependent manner. Isoform 2 is expressed in most normal tissues but is not detected in brain, lung, prostate, muscle, fetal brain, spinal cord and fetal liver. Isoform 3 is expressed in most normal tissues but is not detected in lung, spleen, testis, fetal brain, spinal cord and fetal liver. Isoform 7 is expressed in most normal tissues but is not detected in prostate, uterus, skeletal muscle and breast. Isoform 8 is detected only in colon, bone marrow, testis, fetal brain and intestine. Isoform 9 is expressed in most normal tissues but is not detected in most normal tissues but is not detected only in colon, bone marrow, testis, fetal brain and intestine. Isoform 9 is expressed in most normal tissues but is not detected in brain, heart, lung, fetal liver, salivary gland, breast or intestine  |
