KAT9 Rabbit mAb

Catalog # AP77777

Product Information

Application	WB, IF, ICC, IP
Primary Accession	Q9H9T3
Reactivity	Rat, Human, Mouse
Host	Rabbit
Clonality	Monoclonal Antibody
Isotype	IgG
Conjugate	Unconjugated
Immunogen	A synthesized peptide derived from human KAT9 / Elp3
Purification	Affinity Chromatography
Calculated MW	62259

Additional Information

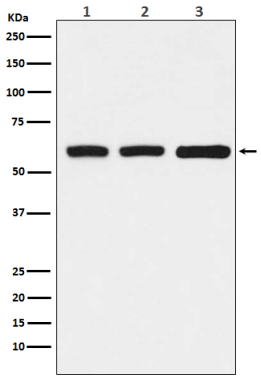

Gene ID	55140
Other Names	ELP3
Dilution	WB~~1/500-1/1000 IF~~1:50~200 ICC~~N/A IP~~N/A
Format	Liquid in 10mM PBS, pH 7.4, 150mM sodium chloride, 0.05% BSA, 0.02% sodium azide and 50% glycerol.
Storage	Store at 4°C short term. Aliquot and store at -20°C long term. Avoid freeze/thaw cycles.

Protein Information

Name	ELP3 {ECO:0000303|PubMed:15902492, ECO:0000312|HGNC:HGNC:20696}
Function	Catalytic tRNA acetyltransferase subunit of the elongator complex which is required for multiple tRNA modifications, including mcm5U (5-methoxycarbonylmethyl uridine), mcm5s2U (5-methoxycarbonylmethyl-2-thiouridine), and ncm5U (5-carbamoylmethyl uridine) (PubMed:29415125). In the elongator complex, acts as a tRNA uridine(34) acetyltransferase by mediating formation of carboxymethyluridine in the wobble base at position 34 in tRNAs (By similarity). May also act as a protein lysine acetyltransferase by mediating acetylation of target proteins; such activity is however unclear in vivo and recent evidence suggests that ELP3 primarily acts as a tRNA acetyltransferase (PubMed:29415125). Not a major acetyltransferase of tubulin (PubMed:22153374). Involved in neurogenesis: regulates the migration and branching of projection neurons in the developing cerebral cortex, through a process depending on alpha-tubulin acetylation (PubMed:19185337). Required for acetylation of GJA1 in the

	developing cerebral cortex (By similarity).
Cellular Location	Cytoplasm. Nucleus [Isoform 2]: Cytoplasm. Nucleus
Tissue Location	Expressed in the cerebellum and spinal motor neurons.
