Protein Information

Name	TBL1XR1
Synonyms	IRA1, TBLR1
Function	F-box-like protein involved in the recruitment of the ubiquitin/19S proteasome complex to nuclear receptor-regulated transcription units. Plays an essential role in transcription activation mediated by nuclear receptors. Probably acts as integral component of the N-Cor corepressor complex that mediates the recruitment of the 19S proteasome complex, leading to the subsequent proteasomal degradation of N-Cor complex, thereby allowing cofactor exchange, and transcription activation.
Cellular Location	Nucleus.
Tissue Location	Widely expressed including the pituitary, hypothalamus, white and brown adipose tissue, muscle and liver
