

# MEKK1 Antibody (C-term)

Purified Rabbit Polyclonal Antibody (Pab) Catalog # AP7907a

## **Product Information**

**Application** WB, IHC-P, E **Primary Accession** Q13233 P53349 **Other Accession** Reactivity Human **Predicted** Mouse Host Rabbit Clonality Polyclonal Isotype Rabbit IgG **Clone Names** RB00999 164470 **Calculated MW** 1145-1176 **Antigen Region** 

## **Additional Information**

**Gene ID** 4214

Other Names Mitogen-activated protein kinase kinase kinase 1, MAPK/ERK kinase kinase 1,

MEK kinase 1, MEKK 1, MAP3K1, MAPKKK1, MEKK, MEKK1

Target/Specificity This MEKK1 antibody is generated from rabbits immunized with a KLH

conjugated synthetic peptide between 1145-1176 amino acids from the

C-terminal region of human MEKK1.

**Dilution** WB~~1:1000 IHC-P~~1:100~500 E~~Use at an assay dependent concentration.

**Format** Purified polyclonal antibody supplied in PBS with 0.09% (W/V) sodium azide.

This antibody is prepared by Saturated Ammonium Sulfate (SAS) precipitation

followed by dialysis against PBS.

**Storage** Maintain refrigerated at 2-8°C for up to 2 weeks. For long term storage store

at -20°C in small aliquots to prevent freeze-thaw cycles.

**Precautions** MEKK1 Antibody (C-term) is for research use only and not for use in

diagnostic or therapeutic procedures.

## **Protein Information**

Name MAP3K1

Synonyms MAPKKK1, MEKK, MEKK1

#### **Function**

Component of a protein kinase signal transduction cascade (PubMed: 9808624). Activates the ERK and JNK kinase pathways by phosphorylation of MAP2K1 and MAP2K4 (PubMed: 9808624). May phosphorylate the MAPK8/JNK1 kinase (PubMed: 17761173). Activates CHUK and IKBKB, the central protein kinases of the NF-kappa-B pathway (PubMed: 9808624).

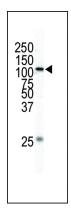

# **Background**

Mitogen-activated protein kinase (MAPK) signaling cascades include MAPK or extracellular signal-regulated kinase (ERK), MAPK kinase (MKK or MEK), and MAPK kinase kinase (MAPKKK or MEKK). MAPKK kinase/MEKK phosphorylates and activates its downstream protein kinase, MAPK kinase/MEK, which in turn activates MAPK. The kinases of these signaling cascades are highly conserved, and homologs exist in yeast, Drosophila, and mammalian cells. MEKK1 can phosphorylate and activate MAPKK 1 and MAPKK 2 (MEK1/MEK2) which leads to phosphorylation of MAP kinases. It is also a highly efficient activator of the JNK cascade. The protein contains a putative 1 RING-type zinc finger and 1 SWIM-type zinc finger.

# **Images**

Western blot analysis of anti-MEKK1 Pab (Cat. #AP7907a) in HL-60 cell lysate. MEKK1 (Arrow) was detected using purified Pab. Secondary HRP-anti-rabbit was used for signal visualization with chemiluminescence.

Formalin-fixed and paraffin-embedded human cancer tissue reacted with the primary antibody, which was peroxidase-conjugated to the secondary antibody, followed by AEC staining. This data demonstrates the use of this antibody for immunohistochemistry; clinical relevance has not been evaluated. BC = breast carcinoma; HC = hepatocarcinoma.
