

CDK2 Antibody

Rabbit mAb Catalog # AP90087

Product Information

Application Primary Accession Reactivity Clonality Other Names	WB, IHC, IF, ICC, IP, IHF <u>P24941</u> Rat, Human, Mouse Monoclonal Cyclin-dependent kinase 1; CDC28, CDC2A; CDK1; MPF; kinase Cdc2; p34 protein kinase;
lsotype	Rabbit IgG
Host	Rabbit
Calculated MW	33930

Additional Information

Dilution Purification	WB 1:500~1:1000 IHC 1:50~1:100 ICC/IF 1:50~1:200 IP 1:30 Affinity-chromatography
Immunogen	A synthesized peptide derived from human Cdk2
Description	The protein encoded by this gene is a member of the Ser/Thr protein kinase family. This protein is a catalytic subunit of the highly conserved protein kinase complex known as M-phase promoting factor (MPF), which is essential for G1/S and G2/M phase transitions of eukaryotic cell cycle.
Storage Condition and Buffer	Rabbit IgG in phosphate buffered saline , pH 7.4, 150mM NaCl, 0.02% sodium azide and 50% glycerol. Store at +4°C short term. Store at -20°C long term. Avoid freeze / thaw cycle.

Protein Information

Name	CDK2
Synonyms	CDKN2
Function	Serine/threonine-protein kinase involved in the control of the cell cycle; essential for meiosis, but dispensable for mitosis (PubMed: <u>10499802</u> , PubMed: <u>10884347</u> , PubMed: <u>10995386</u> , PubMed: <u>10995387</u> , PubMed: <u>11051553</u> , PubMed: <u>11113184</u> , PubMed: <u>12944431</u> , PubMed: <u>15800615</u> , PubMed: <u>17495531</u> , PubMed: <u>19966300</u> , PubMed: <u>20935635</u> , PubMed: <u>21262353</u> , PubMed: <u>21596315</u> , PubMed: <u>28216226</u> , PubMed: <u>28666995</u>). Phosphorylates CABLES1, CTNNB1, CDK2AP2, ERCC6, NBN, USP37, p53/TP53, NPM1, CDK7, RB1, BRCA2, MYC, NPAT, EZH2 (PubMed: <u>10499802</u> , PubMed: <u>10995386</u> , PubMed: <u>10995387</u> , PubMed: <u>11051553</u> , PubMed: <u>11113184</u> , PubMed: <u>12944431</u> , PubMed: <u>15800615</u> , PubMed: <u>19966300</u> , PubMed: <u>20935635</u> , PubMed: <u>1262353</u> , PubMed: <u>21596315</u> , PubMed: <u>20935635</u> , PubMed: <u>21262353</u> , PubMed: <u>21596315</u> , PubMed: <u>22035635</u> ,

duplication of centrosomes and DNA (PubMed: 11051553). Acts at the G1-S transition to promote the E2F transcriptional program and the initiation of DNA synthesis, and modulates G2 progression; controls the timing of entry into mitosis/meiosis by controlling the subsequent activation of cyclin B/CDK1 by phosphorylation, and coordinates the activation of cyclin B/CDK1 at the centrosome and in the nucleus (PubMed:18372919, PubMed:19238148, PubMed:<u>19561645</u>). Crucial role in orchestrating a fine balance between cellular proliferation, cell death, and DNA repair in embryonic stem cells (ESCs) (PubMed: 18372919, PubMed: 19238148, PubMed: 19561645). Activity of CDK2 is maximal during S phase and G2; activated by interaction with cyclin E during the early stages of DNA synthesis to permit G1-S transition, and subsequently activated by cyclin A2 (cyclin A1 in germ cells) during the late stages of DNA replication to drive the transition from S phase to mitosis, the G2 phase (PubMed:<u>18372919</u>, PubMed:<u>19238148</u>, PubMed:<u>19561645</u>). EZH2 phosphorylation promotes H3K27me3 maintenance and epigenetic gene silencing (PubMed: 20935635). Cyclin E/CDK2 prevents oxidative stressmediated Ras-induced senescence by phosphorylating MYC (PubMed: 19966300). Involved in G1-S phase DNA damage checkpoint that prevents cells with damaged DNA from initiating mitosis; regulates homologous recombination-dependent repair by phosphorylating BRCA2, this phosphorylation is low in S phase when recombination is active, but increases as cells progress towards mitosis (PubMed: 15800615, PubMed: 20195506, PubMed:21319273). In response to DNA damage, double- strand break repair by homologous recombination a reduction of CDK2- mediated BRCA2 phosphorylation (PubMed: 15800615). Involved in regulation of telomere repair by mediating phosphorylation of NBN (PubMed:28216226). Phosphorylation of RB1 disturbs its interaction with E2F1 (PubMed: 10499802). NPM1 phosphorylation by cyclin E/CDK2 promotes its dissociates from unduplicated centrosomes, thus initiating centrosome duplication (PubMed:<u>11051553</u>). Cyclin E/CDK2-mediated phosphorylation of NPAT at G1-S transition and until prophase stimulates the NPAT-mediated activation of histone gene transcription during S phase (PubMed: 10995386, PubMed:<u>10995387</u>). Required for vitamin D-mediated growth inhibition by being itself inactivated (PubMed:20147522). Involved in the nitric oxide- (NO) mediated signaling in a nitrosylation/activation-dependent manner (PubMed:20079829). USP37 is activated by phosphorylation and thus triggers G1-S transition (PubMed:<u>21596315</u>). CTNNB1 phosphorylation regulates insulin internalization (PubMed:<u>21262353</u>). Phosphorylates FOXP3 and negatively regulates its transcriptional activity and protein stability (By similarity). Phosphorylates ERCC6 which is essential for its chromatin remodeling activity at DNA double-strand breaks (PubMed: 29203878). Acts as a regulator of the phosphatidylinositol 3- kinase/protein kinase B signal transduction by mediating phosphorylation of the C-terminus of protein kinase B (PKB/AKT1 and PKB/AKT2), promoting its activation (PubMed:24670654).

Cellular Location

Cytoplasm, cytoskeleton, microtubule organizing center, centrosome. Nucleus, Cajal body. Cytoplasm. Endosome Note=Localized at the centrosomes in late G2 phase after separation of the centrosomes but before the start of prophase. Nuclear-cytoplasmic trafficking is mediated during the inhibition by 1,25-(OH)(2)D(3)
