

SATB2 Antibody

Rabbit mAb Catalog # AP90164

Product Information

Application WB, IHC, IF, ICC, IHF

Primary Accession Q9UPW6

Reactivity Rat, Human, Mouse

Clonality Monoclonal

Other Names GLSS; SATB family member 2; SATB homeobox 2; SATB2;Special AT rich

sequence binding protein 2;

IsotypeRabbit IgGHostRabbitCalculated MW82555

Additional Information

Dilution WB 1:500~1:2000 IHC 1:50~1:200 ICC/IF 1:50~1:200

Purification Affinity-chromatography

Immunogen A synthesized peptide derived from human SATB2

DescriptionBinds to DNA, at nuclear matrix- or scaffold-associated regions. Thought to

recognize the sugar-phosphate structure of double-stranded DNA.

Transcription factor controlling nuclear gene expression, by binding to matrix attachment regions (MARs) of DNA and inducing a local chromatin-loop remodeling. Acts as a docking site for several chromatin remodeling enzymes and also by recruiting corepressors (HDACs) or coactivators (HATs) directly to

promoters and enhancers.

Storage Condition and Buffer Rabbit IgG in phosphate buffered saline, pH 7.4, 150mM NaCl, 0.02% sodium

azide and 50% glycerol. Store at +4°C short term. Store at -20°C long term.

Avoid freeze / thaw cycle.

Protein Information

Name SATB2

Synonyms KIAA1034

Function Binds to DNA, at nuclear matrix- or scaffold-associated regions. Thought to

recognize the sugar-phosphate structure of double- stranded DNA.

Transcription factor controlling nuclear gene expression, by binding to matrix attachment regions (MARs) of DNA and inducing a local chromatin-loop remodeling. Acts as a docking site for several chromatin remodeling enzymes and also by recruiting corepressors (HDACs) or coactivators (HATs) directly to promoters and enhancers. Required for the initiation of the upper-layer neurons (UL1) specific genetic program and for the inactivation of deep-layer

neurons (DL) and UL2 specific genes, probably by modulating BCL11B

expression. Repressor of Ctip2 and regulatory determinant of corticocortical connections in the developing cerebral cortex. May play an important role in palate formation. Acts as a molecular node in a transcriptional network regulating skeletal development and osteoblast differentiation.

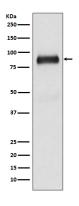

Cellular Location Nucleus matrix {ECO:0000255 | PROSITE- ProRule:PRU00108,

ECO:0000255 | PROSITE-ProRule: PRU00374, ECO:0000269 | PubMed: 14701874 }

Tissue Location High expression in adult brain, moderate expression in fetal brain, and weak

expression in adult liver, kidney, and spinal cord and in select brain regions, including amygdala, corpus callosum, caudate nucleus, and hippocampus.
