

# Histone H2A.X Antibody

Rabbit mAb Catalog # AP90312

## **Product Information**

Application Primary Accession Reactivity Clonality Other Names	WB, IHC, IF, ICC, IP, IHF <u>P16104</u> Rat, Human, Mouse Monoclonal H2A.X; H2AFX; H2a/x; HIST5-2AX; Histone H2A.X; AW228881; H2A histone family member X; Histone 2A;
Isotype	Rabbit IgG
Host	Rabbit
Calculated MW	15145

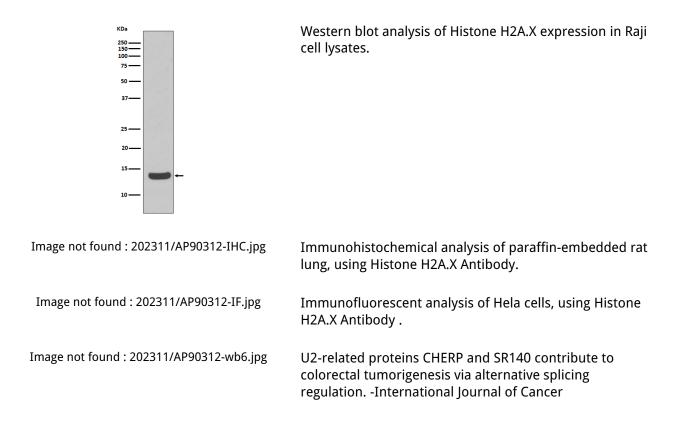

### **Additional Information**

Dilution Purification	WB 1:500~1:2000 IHC 1:50~1:200 ICC/IF 1:50~1:200 IP 1:50 Affinity-chromatography
Immunogen	A synthesized peptide derived from human Histone H2A.X
Description	Variant histone H2A which replaces conventional H2A in a subset of nucleosomes. Nucleosomes wrap and compact DNA into chromatin, limiting DNA accessibility to the cellular machineries which require DNA as a template. Histones thereby play a central role in transcription regulation, DNA repair, DNA replication and chromosomal stability.
Storage Condition and Buffer	Rabbit IgG in phosphate buffered saline , pH 7.4, 150mM NaCl, 0.02% sodium azide and 50% glycerol. Store at +4°C short term. Store at -20°C long term. Avoid freeze / thaw cycle.

#### **Protein Information**

Name	H2AX ( <u>HGNC:4739</u> )
Function	Variant histone H2A which replaces conventional H2A in a subset of nucleosomes. Nucleosomes wrap and compact DNA into chromatin, limiting DNA accessibility to the cellular machineries which require DNA as a template. Histones thereby play a central role in transcription regulation, DNA repair, DNA replication and chromosomal stability. DNA accessibility is regulated via a complex set of post- translational modifications of histones, also called histone code, and nucleosome remodeling. Required for checkpoint-mediated arrest of cell cycle progression in response to low doses of ionizing radiation and for efficient repair of DNA double strand breaks (DSBs) specifically when modified by C-terminal phosphorylation.
Cellular Location	Nucleus. Chromosome
