

Nanog Antibody

Rabbit mAb Catalog # AP90614

Product Information

Application WB, IHC, IF, FC, ICC, IHF

Primary Accession

Reactivity

Clonality

Q9H9S0

Human

Monoclonal

Other Names Homeobox transcription factor Nanog

IsotypeRabbit IgGHostRabbitCalculated MW34620

Additional Information

Dilution WB 1:500~1:2000 IHC 1:50~1:200 ICC/IF 1:50~1:200 FC 1:50

Purification Affinity-chromatography

Immunogen A synthesized peptide derived from human Nanog

Description Transcription regulator involved in inner cell mass and embryonic stem (ES)

cells proliferation and self-renewal. Imposes pluripotency on ES cells and prevents their differentiation towards extraembryonic endoderm and trophectoderm lineages. Acts as a transcriptional activator or repressor By

similarity.

Storage Condition and Buffer Rabbit IgG in phosphate buffered saline, pH 7.4, 150mM NaCl, 0.02% sodium

azide and 50% glycerol. Store at +4°C short term. Store at -20°C long term.

Avoid freeze / thaw cycle.

Protein Information

Name NANOG

Function Transcription regulator involved in inner cell mass and embryonic stem (ES)

cells proliferation and self-renewal. Imposes pluripotency on ES cells and prevents their differentiation towards extraembryonic endoderm and trophectoderm lineages. Blocks bone morphogenetic protein-induced

mesoderm differentiation of ES cells by physically interacting with SMAD1 and interfering with the recruitment of coactivators to the active SMAD

transcriptional complexes. Acts as a transcriptional activator or repressor. Binds optimally to the DNA consensus sequence 5'-TAAT[GT][GT]-3' or 5'-[CG][GA][CG]C[GC]ATTAN[GC]- 3'. Binds to the POU5F1/OCT4 promoter (PubMed:25825768). Able to autorepress its expression in differentiating (ES) cells: binds to its own promoter following interaction with ZNF281/ZFP281, leading to recruitment of the NuRD complex and subsequent repression of expression. When overexpressed, promotes cells to enter into S phase and

proliferation.

Cellular Location Nucleus {ECO:0000255 | PROSITE-ProRule:PRU00108,

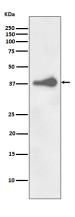

ECO:0000269 | PubMed:15983365}

Tissue Location Expressed in testicular carcinoma and derived germ cell tumors (at protein

level). Expressed in fetal gonads, ovary and testis. Also expressed in ovary teratocarcinoma cell line and testicular embryonic carcinoma. Not expressed

in many somatic organs and oocytes.
