

# Fibronectin Antibody

Rabbit mAb Catalog # AP90624

### **Product Information**

**Application** WB, IHC, IF, ICC, IHF

**Primary Accession** P02751 Human Reactivity Clonality Monoclonal

**Other Names** Anastellin; CIG; Cold-insoluble globulin; ED-B; Fibronectin; fibronectin 1; FINC;

FN1; FNZ; GFND; GFND2; LETS; migration-stimulating factor; MSF;

Isotype Rabbit IgG Host Rabbit Calculated MW 272320

#### **Additional Information**

Dilution WB 1:500~1:2000 IHC 1:50~1:200 ICC/IF 1:50~1:200

**Purification** Affinity-chromatography

**Immunogen** A synthesized peptide derived from human Fibronectin

**Description** FN1 Fibronectins bind cell surfaces and various compounds including

collagen, fibrin, heparin, DNA, and actin. Fibronectins are involved in cell adhesion, cell motility, opsonization, wound healing, and maintenance of cell shape. Mostly heterodimers or multimers of alternatively spliced variants, connected by 2 disulfide bonds near the carboxyl ends; to a lesser extent

homodimers.

Storage Condition and Buffer Rabbit IgG in phosphate buffered saline, pH 7.4, 150mM NaCl, 0.02% sodium

azide and 50% glycerol. Store at +4°C short term. Store at -20°C long term.

Avoid freeze / thaw cycle.

## **Protein Information**

FN1 ( HGNC:3778) Name

FΝ **Synonyms** 

**Function** Fibronectins bind cell surfaces and various compounds including collagen,

> fibrin, heparin, DNA, and actin (PubMed:3024962, PubMed:3593230, PubMed:3900070, PubMed:7989369). Fibronectins are involved in cell adhesion, cell motility, opsonization, wound healing, and maintenance of cell

shape (PubMed:3024962, PubMed:3593230, PubMed:3900070,

PubMed: <u>7989369</u>). Involved in osteoblast compaction through the fibronectin fibrillogenesis cell-mediated matrix assembly process, essential for osteoblast mineralization (By similarity). Participates in the regulation of type I collagen deposition by osteoblasts (By similarity). Acts as a ligand for the LILRB4

receptor, inhibiting FCGR1A/CD64-mediated monocyte activation

(PubMed: 34089617).

**Cellular Location** 

Secreted, extracellular space, extracellular matrix. Secreted

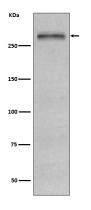

{ECO:0000250 | UniProtKB:P11276}

**Tissue Location** 

Expressed in the inner limiting membrane and around blood vessels in the retina (at protein level) (PubMed:29777959) Plasma FN (soluble dimeric form) is secreted by hepatocytes. Cellular FN (dimeric or cross-linked multimeric forms), made by fibroblasts, epithelial and other cell types, is deposited as fibrils in the extracellular matrix. Ugl-Y1, Ugl-Y2 and Ugl-Y3 are found in urine

(PubMed:17614963).
