

GPX1 Antibody

Rabbit mAb Catalog # AP91017

Product Information

Application	WB, IP
Primary Accession	<u>P07203</u>
Reactivity	Rat, Human, Mouse
Clonality	Monoclonal
Other Names	GPX1; GSHPX1; MGC14399; MGC88245 ; Glutathione Peroxidase 1;
lsotype	Rabbit IgG
Host	Rabbit
Calculated MW	22088

Additional Information

Dilution Purification Immunogen Description	WB 1:500~1:2000 IP 1:50 Affinity-chromatography A synthesized peptide derived from human GPX1 Glutathione peroxidase 1 (GPX1) is a cytosolic selenoprotein which reduces hydrogen peroxide to water. GPX1 is the most abundant and ubiquitous among the five GPX isoforms identified so far. It is an important component in the anti-oxidative defense in cells and is associated with a variety of disease conditions, such as colon cancer, coronary artery disease and insulin
Storage Condition and Buffer	resistance. Rabbit IgG in phosphate buffered saline , pH 7.4, 150mM NaCl, 0.02% sodium azide and 50% glycerol. Store at +4°C short term. Store at -20°C long term. Avoid freeze / thaw cycle.

Protein Information

Name	GPX1 (<u>HGNC:4553</u>)
Function	Catalyzes the reduction of hydroperoxides in a glutathione- dependent manner thus regulating cellular redox homeostasis (PubMed: <u>11115402</u> , PubMed: <u>36608588</u>). Can reduce small soluble hydroperoxides such as H2O2, cumene hydroperoxide and tert-butyl hydroperoxide, as well as several fatty acid-derived hydroperoxides (PubMed: <u>11115402</u> , PubMed: <u>36608588</u>). In platelets catalyzes the reduction of 12-hydroperoxyeicosatetraenoic acid, the primary product of the arachidonate 12-lipoxygenase pathway (PubMed: <u>11115402</u>).
Cellular Location	Cytoplasm {ECO:0000250 UniProtKB:P11352}. Mitochondrion {ECO:0000250 UniProtKB:P11352}
Tissue Location	Expressed in platelets (at protein level).
