

Galectin 3 Antibody

Rabbit mAb Catalog # AP91134

Product Information

Application WB, IF, FC, ICC
Primary Accession P17931
Reactivity Rat, Human
Clonality Monoclonal

Other Names CBP35; Gal-3; 35 kDa lectin; GALBP; IgE-binding protein; Laminin-binding

protein; Lectin L-29; Mac-2 antigen; LGALS3; MAC2; Galectin 3; Galectin3;

IsotypeRabbit IgGHostRabbitCalculated MW26152

Additional Information

Dilution WB 1:500~1:2000 ICC/IF 1:50~1:200 FC 1:50

Purification Affinity-chromatography

Immunogen A synthesized peptide derived from human Galectin 3

Description Galactose-specific lectin which binds IgE. May mediate with the alpha-3,

beta-1 integrin the stimulation by CSPG4 of endothelial cells migration. Together with DMBT1, required for terminal differentiation of columnar

epithelial cells during early embryogenesis.

Storage Condition and Buffer Rabbit IgG in phosphate buffered saline, pH 7.4, 150mM NaCl, 0.02% sodium

azide and 50% glycerol. Store at +4°C short term. Store at -20°C long term.

Avoid freeze / thaw cycle.

Protein Information

Name LGALS3 (HGNC:6563)

Synonyms MAC2

Function Galactose-specific lectin which binds IgE. May mediate with the alpha-3,

beta-1 integrin the stimulation by CSPG4 of endothelial cells migration. Together with DMBT1, required for terminal differentiation of columnar epithelial cells during early embryogenesis (By similarity). In the nucleus: acts as a pre-mRNA splicing factor. Involved in acute inflammatory responses including neutrophil activation and adhesion, chemoattraction of monocytes macrophages, opsonization of apoptotic neutrophils, and activation of mast cells. Together with TRIM16, coordinates the recognition of membrane damage with mobilization of the core autophagy regulators ATG16L1 and

BECN1 in response to damaged endomembranes.

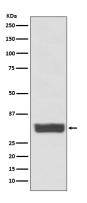

Cellular Location Cytoplasm. Nucleus. Secreted. Note=Secreted by a non- classical secretory

pathway and associates with the cell surface. Can be secreted; the secretion is dependent on protein unfolding and facilitated by the cargo receptor TMED10; it results in protein translocation from the cytoplasm into the ERGIC (endoplasmic reticulum- Golgi intermediate compartment) followed by vesicle entry and secretion (PubMed:32272059).

Tissue Location

A major expression is found in the colonic epithelium. It is also abundant in the activated macrophages. Expressed in fetal membranes.

Images

Western blot analysis of Galectin 3 expression in MCF-7 cell lysate.
