

HEC1 Antibody

Rabbit mAb Catalog # AP91388

Product Information

Application Primary Accession Reactivity Clonality Other Names	WB, IP <u>O14777</u> Rat, Human, Mouse Monoclonal HEC; HsHec1; hsNDC80; Kinetochore protein Hec1; Kinetochore-associated protein 2; KNTC2; ndc80; TID3;
lsotype	Rabbit IgG
Host	Rabbit
Calculated MW	73913

Additional Information

Dilution Purification Immunogen	WB 1:1000~1:5000 IP 1:50 Affinity-chromatography A synthesized peptide derived from human HEC1
Description	Acts as a component of the essential kinetochore-associated NDC80 complex, which is required for chromosome segregation and spindle checkpoint activity. Required for kinetochore integrity and the organization of stable microtubule binding sites in the outer plate of the kinetochore.
Storage Condition and Buffer	6 1

Protein Information

Name	NDC80
Synonyms	HEC, HEC1, KNTC2
Function	Acts as a component of the essential kinetochore-associated NDC80 complex, which is required for chromosome segregation and spindle checkpoint activity (PubMed:12351790, PubMed:14654001, PubMed:14699129, PubMed:15062103, PubMed:15235793, PubMed:15239953, PubMed:15548592, PubMed:16732327, PubMed:30409912, PubMed:9315664). Required for kinetochore integrity and the organization of stable microtubule binding sites in the outer plate of the kinetochore (PubMed:15548592, PubMed:30409912). The NDC80 complex synergistically enhances the affinity of the SKA1 complex for microtubules and may allow the NDC80 complex to track depolymerizing microtubules (PubMed:23085020). Plays a role in chromosome congression and is essential for the end-on attachment of the kinetochores to spindle microtubules

(PubMed:23891108, PubMed:25743205).

Cellular Location

Nucleus. Chromosome, centromere, kinetochore. Note=Localizes to kinetochores from late prophase to anaphase (PubMed:14699129) Localizes specifically to the outer plate of the kinetochore (PubMed:14699129).

Images
