

Factor H Antibody

Rabbit mAb Catalog # AP91404

Product Information

Application Primary Accession Reactivity Clonality Other Names	WB, IF, ICC <u>P08603</u> Human Monoclonal AHUS1; AMBP1; ARMD4; ARMS1; beta1H; CFH; CFHL3; complement factor H, isoform b; Factor H; factor H like 1; FHL1; HF1; HF2; HUS;
lsotype	Rabbit IgG
Host	Rabbit
Calculated MW	139096

Additional Information

Dilution Purification Immunogen	WB 1:500~1:2000 ICC/IF 1:50~1:200 Affinity-chromatography A synthesized peptide derived from human Factor H
Description	Factor H functions as a cofactor in the inactivation of C3b by factor I and also increases the rate of dissociation of the C3bBb complex (C3 convertase) and the (C3b)NBB complex (C5 convertase) in the alternative complement pathway.
Storage Condition and Buffer	

Protein Information

Name	CFH
Synonyms	HF, HF1, HF2
Function	Glycoprotein that plays an essential role in maintaining a well-balanced immune response by modulating complement activation. Acts as a soluble inhibitor of complement, where its binding to self markers such as glycan structures prevents complement activation and amplification on cell surfaces (PubMed:21285368, PubMed:21317894, PubMed:25402769). Accelerates the decay of the complement alternative pathway (AP) C3 convertase C3bBb, thus preventing local formation of more C3b, the central player of the complement amplification loop (PubMed:19503104, PubMed:21317894, PubMed:26700768). As a cofactor of the serine protease factor I, CFH also regulates proteolytic degradation of already-deposited C3b (PubMed:18252712, PubMed:23332154, PubMed:28671664). In addition, mediates several cellular responses through interaction with specific

	receptors. For example, interacts with CR3/ITGAM receptor and thereby mediates the adhesion of human neutrophils to different pathogens. In turn, these pathogens are phagocytosed and destroyed (PubMed: <u>20008295</u> , PubMed: <u>9558116</u>).
Cellular Location	Secreted.
Tissue Location	Expressed in the retinal pigment epithelium (at protein level) (PubMed:25136834). CFH is one of the most abundant complement components in blood where the liver is the major source of CFH protein in vivo. in addition, CFH is secreted by additional cell types including monocytes, fibroblasts, or endothelial cells (PubMed:2139673, PubMed:25136834, PubMed:2968404, PubMed:6444659)
