

Langerin (CD207) Antibody

Rabbit mAb Catalog # AP91536

Product Information

Application IHC
Primary Accession Q9UJ71
Reactivity Human
Clonality Monoclonal

Other Names CD207; CD207 antigen; CD207 antigen, langerin; CD207 molecule; CLEC4K;

Langerhans cell specific c type lectin; Langerin;

IsotypeRabbit IgGHostRabbitCalculated MW36725

Additional Information

Dilution IHC 1:50~1:200

Purification Affinity-chromatography

Immunogen A synthesized peptide derived from human Langerin (CD207)

Description Calcium-dependent lectin displaying mannose-binding specificity. Induces the

formation of Birbeck granules (BGs); is a potent regulator of membrane

superimposition and zippering.

Storage Condition and Buffer Rabbit IgG in phosphate buffered saline, pH 7.4, 150mM NaCl, 0.02% sodium

azide and 50% glycerol. Store at +4°C short term. Store at -20°C long term.

Avoid freeze / thaw cycle.

Protein Information

Name CD207

Synonyms CLEC4K

Function Calcium-dependent lectin displaying mannose-binding specificity. Induces

the formation of Birbeck granules (BGs); is a potent regulator of membrane superimposition and zippering. Binds to sulfated as well as mannosylated glycans, keratan sulfate (KS) and beta-glucans. Facilitates uptake of antigens and is involved in the routing and/or processing of antigen for presentation to T cells. Major receptor on primary Langerhans cells for Candida species, Saccharomyces species, and Malassezia furfur. Protects against human immunodeficiency virus-1 (HIV-1) infection. Binds to high-mannose structures present on the envelope glycoprotein which is followed by subsequent targeting of the virus to the Birbeck granules leading to its rapid degradation.

Cellular Location Membrane; Single- pass type II membrane protein. Note=Found in Birbeck

granules (BGs), which are organelles consisting of superimposed and zippered

membranes

Tissue Location

Exclusively expressed by Langerhans cells. Expressed in astrocytoma and malignant ependymoma, but not in normal brain tissues.
