

# GOT2 Antibody

Rabbit mAb Catalog # AP92544

## **Product Information**

| Application       | WB, IHC, IP          |
|-------------------|----------------------|
| Primary Accession | <u>P00505</u>        |
| Reactivity        | Rat, Human, Mouse    |
| Clonality         | Monoclonal           |
| Other Names       | KAT4; KATIV; mitAAT; |
| lsotype           | Rabbit IgG           |
| Host              | Rabbit               |
| Calculated MW     | 47518                |

### **Additional Information**

| Dilution<br>Purification     | WB 1:500~1:2000 IHC 1:50~1:200 IP 1:50 FC 1:100<br>Affinity-chromatography  |
|------------------------------|---|
| Immunogen                    | A synthesized peptide derived from human GOT2   |
| Description                  | Plays a key role in amino acid metabolism. Important for metabolite   |
|                              | exchange between mitochondria and cytosol. Facilitates cellular uptake of long-chain free fatty acids.  |
| Storage Condition and Buffer | Rabbit IgG in phosphate buffered saline , pH 7.4, 150mM NaCl, 0.02% sodium azide and 50% glycerol. Store at +4°C short term. Store at -20°C long term. Avoid freeze / thaw cycle. |

# **Protein Information**

| Name              | GOT2 ( <u>HGNC:4433</u> )   |
|-------------------|---|
| Function          | Catalyzes the irreversible transamination of the L-tryptophan metabolite<br>L-kynurenine to form kynurenic acid (KA). As a member of the<br>malate-aspartate shuttle, it has a key role in the intracellular NAD(H) redox<br>balance. Is important for metabolite exchange between mitochondria and<br>cytosol, and for amino acid metabolism. Facilitates cellular uptake of<br>long-chain free fatty acids. |
| Cellular Location | Mitochondrion matrix. Cell membrane. Note=Exposure to alcohol promotes translocation to the cell membrane.  |
| Imagaa            |   |
