

# Fibronectin Antibody

Rabbit mAb

Catalog # AP92682

## Product Information

|                          |  |
|--------------------------|--|
| <b>Application</b>       | WB, IF, FC, ICC  |
| <b>Primary Accession</b> | <a href="#">P02751</a>   |
| <b>Reactivity</b>        | Rat, Human, Mouse  |
| <b>Clonality</b>         | Monoclonal   |
| <b>Other Names</b>       | CIG; Cold insoluble globulin; Fibronectin 1; FINC; FN; FN1; FNZ; GFND; GFND2; LETS; Migration stimulating factor; MSF; |
| <b>Isotype</b>           | Rabbit IgG   |
| <b>Host</b>              | Rabbit   |
| <b>Calculated MW</b>     | 272320   |

## Additional Information

|                                     |   |
|-------------------------------------|---|
| <b>Dilution</b>                     | WB 1:500~1:2000 ICC/IF 1:50~1:200 FC 1:50   |
| <b>Purification</b>                 | Affinity-chromatography   |
| <b>Immunogen</b>                    | A synthesized peptide derived from human Fibronectin  |
| <b>Description</b>                  | Fibronectins bind cell surfaces and various compounds including collagen, fibrin, heparin, DNA, and actin. Fibronectins are involved in cell adhesion, cell motility, opsonization, wound healing, and maintenance of cell shape. Involved in osteoblast compaction through the fibronectin fibrillogenesis cell-mediated matrix assembly process, essential for osteoblast mineralization. |
| <b>Storage Condition and Buffer</b> | Rabbit IgG in phosphate buffered saline , pH 7.4, 150mM NaCl, 0.02% sodium azide and 50% glycerol. Store at +4°C short term. Store at -20°C long term. Avoid freeze / thaw cycle.   |

## Protein Information

|                 |  |
|-----------------|--|
| <b>Name</b>     | FN1 ( <a href="#">HGNC:3778</a> )  |
| <b>Synonyms</b> | FN   |
| <b>Function</b> | Fibronectins bind cell surfaces and various compounds including collagen, fibrin, heparin, DNA, and actin (PubMed: <a href="#">3024962</a> , PubMed: <a href="#">3593230</a> , PubMed: <a href="#">3900070</a> , PubMed: <a href="#">7989369</a> ). Fibronectins are involved in cell adhesion, cell motility, opsonization, wound healing, and maintenance of cell shape (PubMed: <a href="#">3024962</a> , PubMed: <a href="#">3593230</a> , PubMed: <a href="#">3900070</a> , PubMed: <a href="#">7989369</a> ). Involved in osteoblast compaction through the fibronectin fibrillogenesis cell-mediated matrix assembly process, essential for osteoblast mineralization (By similarity). Participates in the regulation of type I collagen deposition by osteoblasts (By similarity). Acts as a ligand for the LILRB4 receptor, inhibiting FCGR1A/CD64-mediated monocyte activation |

(PubMed:[34089617](#)).

### Cellular Location

Secreted, extracellular space, extracellular matrix. Secreted {ECO:0000250|UniProtKB:P11276}

### Tissue Location

Expressed in the inner limiting membrane and around blood vessels in the retina (at protein level) (PubMed:29777959) Plasma FN (soluble dimeric form) is secreted by hepatocytes. Cellular FN (dimeric or cross-linked multimeric forms), made by fibroblasts, epithelial and other cell types, is deposited as fibrils in the extracellular matrix. Ugl-Y1, Ugl-Y2 and Ugl-Y3 are found in urine (PubMed:17614963).
