Histone H2B (Di Methyl Lys5) Rabbit Polyclonal Antibody

Histone H2B (Di Methyl Lys5) Rabbit Polyclonal Antibody
Catalog # AP93595

Product Information

Application	WB
Primary Accession	Q96A08/P33778/P62807
Reactivity	Human, Mouse, Rat
Clonality	Polyclonal

Additional Information

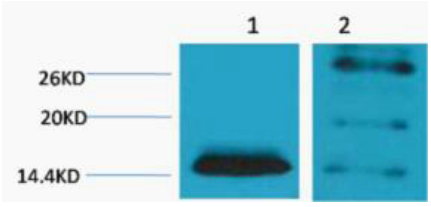

Dilution	WB~~1:1000
Storage Conditions	-20℃

Protein Information

Background

Histones are basic nuclear proteins that are responsible for the nucleosome structure of the chromosomal fiber in eukaryotes. Nucleosomes consist of approximately 146 bp of DNA wrapped around a histone octamer composed of pairs of each of the four core histones (H2A, H2B, H3, and H4). The chromatin fiber is further compacted through the interaction of a linker histone, H1, with the DNA between the nucleosomes to form higher order chromatin structures. This gene is intronless and encodes a replication-dependent histone that is a testis/sperm-specific member of the histone H2B family. Transcripts from this gene contain a palindromic termination element. [provided by RefSeq, Aug 2015],

Images

Western blot analysis of 1) Hela, 2) 3T3, diluted at 1:2000. Secondary antibody was diluted at 1:20000 cells nucleus extracted by Minute TM Cytoplasmic and Nuclear Fractionation kit.
