

Histone H3 (Di Methyl Lys9) Rabbit Polyclonal Antibody

Histone H3 (Di Methyl Lys9) Rabbit Polyclonal Antibody

Catalog # AP93607

Product Information

Application	WB
Primary Accession	P68431/Q71DI3/P84243
Reactivity	Human, Mouse, Rat
Clonality	Polyclonal

Additional Information

Dilution	WB~~1:1000
Storage Conditions	-20°C

Protein Information

Background

Histones are basic nuclear proteins that are responsible for the nucleosome structure of the chromosomal fiber in eukaryotes. This structure consists of approximately 146 bp of DNA wrapped around a nucleosome, an octamer composed of pairs of each of the four core histones (H2A, H2B, H3, and H4). The chromatin fiber is further compacted through the interaction of a linker histone, H1, with the DNA between the nucleosomes to form higher order chromatin structures. This gene is intronless and encodes a replication-dependent histone that is a member of the histone H3 family. Transcripts from this gene lack polyA tails; instead, they contain a palindromic termination element. This gene is found in the large histone gene cluster on chromosome 6p22-p21.3. [provided by RefSeq, Aug 2015],
