Protein Information

Name CDCA5

Function Regulator of sister chromatid cohesion in mitosis stabilizing cohesin

complex association with chromatin. May antagonize the action of WAPL which stimulates cohesin dissociation from chromatin. Cohesion ensures that chromosome partitioning is accurate in both meiotic and mitotic cells and

plays an important role in DNA repair. Required for efficient DNA

double-stranded break repair.

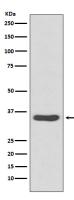

Cellular Location Nucleus. Chromosome. Cytoplasm Note=Associates with nuclear chromatin

from S phase until metaphase and is released in the cytoplasm upon nuclear

envelope breakdown
