

# Anti-ALDH1A1 Antibody

Catalog # AP95659

## Product Information

---

|                   |                        |
|-------------------|------------------------|
| Application       | WB, IHC, FC            |
| Primary Accession | <a href="#">P00352</a> |
| Reactivity        | Human                  |
| Host              | Mouse                  |
| Clonality         | Monoclonal             |
| Calculated MW     | 54862                  |

## Additional Information

---

|                    |                                                                                                                                                              |
|--------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Gene ID            | 216                                                                                                                                                          |
| Other Names        | ALDC; ALDH1; PUMB1; Retinal dehydrogenase 1; RALDH 1; RaLDH1; ALDH-E1; ALHDII; Aldehyde dehydrogenase family 1 member A1; Aldehyde dehydrogenase, cytosolic, |
| Target/Specificity | Recombinant fusion protein of human ALDH1A1 expressed in E. Coli                                                                                             |
| Dilution           | WB~~WB (1/500 - 1/1000) IHC~~1:100~500 FC~~FC (1/100 - 1/200)                                                                                                |
| Format             | Mouse IgG1. Liquid in PBS, pH 7.3, 30% glycerol, and 0.01% sodium azide.                                                                                     |
| Storage            | Store at -20 °C.Stable for 12 months from date of receipt                                                                                                    |

## Protein Information

---

|          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

| Name     | ALDH1A1 ( <a href="#">HGNC:402</a> )                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| Function | Cytosolic dehydrogenase that catalyzes the irreversible oxidation of a wide range of aldehydes to their corresponding carboxylic acid (PubMed: <a href="#">12941160</a> , PubMed: <a href="#">15623782</a> , PubMed: <a href="#">17175089</a> , PubMed: <a href="#">19296407</a> , PubMed: <a href="#">25450233</a> , PubMed: <a href="#">26373694</a> , PubMed: <a href="#">25413692</a> ). Functions downstream of retinol dehydrogenases and catalyzes the oxidation of retinaldehyde into retinoic acid, the second step in the oxidation of retinol/vitamin A into retinoic acid (PubMed: <a href="#">25413692</a> ). This pathway is crucial to control the levels of retinol and retinoic acid, two important molecules which excess can be teratogenic and cytotoxic (PubMed: <a href="#">25413692</a> ). Also oxidizes aldehydes resulting from lipid peroxidation like (E)-4-hydroxynon-2-enal/HNE, malonaldehyde and hexanal that form protein adducts and are highly cytotoxic. By participating for instance to the clearance of (E)-4-hydroxynon-2-enal/HNE in the lens epithelium prevents the formation of HNE-protein adducts and lens opacification (PubMed: <a href="#">12941160</a> , PubMed: <a href="#">15623782</a> , PubMed: <a href="#">19296407</a> ). Also functions downstream of fructosamine-3-kinase in the fructosamine degradation pathway by catalyzing |

the oxidation of 3- deoxyglucosone, the carbohydrate product of fructosamine 3-phosphate decomposition, which is itself a potent glycating agent that may react with lysine and arginine side-chains of proteins (PubMed:[17175089](#)). Also has an aminobutyraldehyde dehydrogenase activity and is probably part of an alternative pathway for the biosynthesis of GABA/4-aminobutanoate in midbrain, thereby playing a role in GABAergic synaptic transmission (By similarity).

#### Cellular Location

Cytoplasm, cytosol. Cell projection, axon {ECO:0000250 | UniProtKB:P24549}

#### Tissue Location

Expressed by erythrocytes (at protein level).

## Images

Western blot analysis of ALDH1A1 expression in HepG2 (A), A549 (B) whole cell lysates. (Predicted band size: 55 kD; Observed band size: 53 kD)

Immunohistochemical analysis of ALDH1A1 staining in human cervical cancer formalin fixed paraffin embedded tissue section. The section was pre-treated using heat mediated antigen retrieval with sodium citrate buffer (pH 6.0). The section was then incubated with the antibody at room temperature and detected using an HRP conjugated compact polymer system. DAB was used as the chromogen. The section was then counterstained with haematoxylin and mounted with DPX.

Flow cytometric analysis of HeLa cells using Anti-ALDH1A1 Antibody (green) and negative control (red).
