

# Anti-Importin alpha 2 Antibody

Catalog # AP95911

## Product Information

---

|                   |                        |
|-------------------|------------------------|
| Application       | WB, IHC, FC, IF/IC     |
| Primary Accession | <a href="#">P52292</a> |
| Reactivity        | Human, Mouse           |
| Host              | Mouse                  |
| Clonality         | Monoclonal             |
| Calculated MW     | 57862                  |

## Additional Information

---

|                    |                                                                                                     |
|--------------------|-----------------------------------------------------------------------------------------------------|
| Gene ID            | 3838                                                                                                |
| Other Names        | RCH1; SRP1; Importin subunit alpha-1; Karyopherin subunit alpha-2; RAG cohort protein 1; SRP1-alpha |
| Target/Specificity | Recombinant fusion protein of human Importin alpha 2 expressed in E. Coli                           |
| Dilution           | WB~~WB (1/500 - 1/1000) IHC~~1:100~500 FC~~FC (1/100 - 1/200) IF/IC~~N/A                            |
| Format             | Mouse IgG1. Liquid in PBS, pH 7.3, 30% glycerol, and 0.01% sodium azide.                            |
| Storage            | Store at -20 °C.Stable for 12 months from date of receipt                                           |

## Protein Information

| Name     | KPNA2 ( <a href="#">HGNC:6395</a> )                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| Synonyms | RCH1, SRP1                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| Function | Functions in nuclear protein import as an adapter protein for nuclear receptor KPNB1 (PubMed: <a href="#">28991411</a> , PubMed: <a href="#">32130408</a> , PubMed: <a href="#">7604027</a> , PubMed: <a href="#">7754385</a> ). Binds specifically and directly to substrates containing either a simple or bipartite NLS motif (PubMed: <a href="#">28991411</a> , PubMed: <a href="#">32130408</a> , PubMed: <a href="#">7604027</a> , PubMed: <a href="#">7754385</a> ). Docking of the importin/substrate complex to the nuclear pore complex (NPC) is mediated by KPNB1 through binding to nucleoporin FxFG repeats and the complex is subsequently translocated through the pore by an energy requiring, Ran-dependent mechanism (PubMed: <a href="#">7604027</a> , PubMed: <a href="#">7754385</a> ). At the nucleoplasmic side of the NPC, Ran binds to importin-beta and the three components separate and importin-alpha and -beta are re-exported from the nucleus to the cytoplasm where GTP hydrolysis releases Ran from importin. The directionality of nuclear import is thought to be conferred by an asymmetric distribution of the GTP- and GDP-bound forms of Ran between the cytoplasm and nucleus. Mediator of PR-DUB complex component BAP1 nuclear import; |

acts redundantly with KPNA1 and Transportin-1/TNPO1 (PubMed:[35446349](#)).

**Cellular Location**

Cytoplasm. Nucleus

**Tissue Location**

Expressed ubiquitously.

## Images

Western blot analysis of Importin alpha 2 expression in HeLa (A), HEK293 (B), NIH/3T3 (C) whole cell lysates. (Predicted band size: 58 kD; Observed band size: 55 kD)

Immunohistochemical analysis of Importin alpha 2 staining in human lung cancer formalin fixed paraffin embedded tissue section. The section was pre-treated using heat mediated antigen retrieval with sodium citrate buffer (pH 6.0). The section was then incubated with the antibody at room temperature and detected using an HRP conjugated compact polymer system. DAB was used as the chromogen. The section was then counterstained with haematoxylin and mounted with DPX.

Immunofluorescent analysis of Importin alpha 2 staining in HeLa cells. Formalin-fixed cells were permeabilized with 0.1% Triton X-100 in TBS for 5-10 minutes and blocked with 3% BSA-PBS for 30 minutes at room temperature. Cells were probed with the primary antibody in 3% BSA-PBS and incubated overnight at 4 °C in a humidified chamber. Cells were washed with PBST and incubated with an AF488-conjugated secondary antibody (green) in PBS at room temperature in the dark. Phalloidin - AF594 was used to stain Actin filaments (red). DAPI was used to stain the cell nuclei (blue).

Flow cytometric analysis of HeLa cells using Anti-Importin alpha 2 Antibody (green) and negative control (red).
