## Protein Information

---

<b>Name</b>	IL6 ( <a href="#">HGNC:6018</a> )
<b>Synonyms</b>	IFNB2
<b>Function</b>	Cytokine with a wide variety of biological functions in immunity, tissue regeneration, and metabolism. Binds to IL6R, then the complex associates to the signaling subunit IL6ST/gp130 to trigger the intracellular IL6-signaling pathway (Probable). The interaction with the membrane-bound IL6R and IL6ST stimulates 'classic signaling', whereas the binding of IL6 and soluble IL6R to IL6ST stimulates 'trans- signaling'. Alternatively, 'cluster signaling' occurs when membrane- bound IL6:IL6R complexes on transmitter cells activate IL6ST receptors on neighboring receiver cells (Probable).
<b>Cellular Location</b>	Secreted.
<b>Tissue Location</b>	Produced by skeletal muscle.
