

Anti-IL-23a Reference Antibody (tildrakizumab)

Recombinant Antibody Catalog # APR10512

Product Information

Application	FC, Kinetics, Animal Model
Primary Accession	<u>Q9NPF7</u>
Reactivity	Human
Clonality	Monoclonal
Isotype	IgG1
Calculated MW	20730

Additional Information

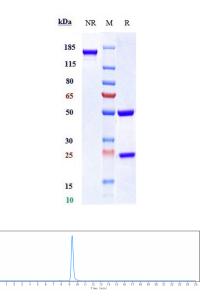

Target/Specificity	IL-23a
Endotoxin Conjugation	Unconjugated
Expression system	CHO Cell
Format	Purified monoclonal antibody supplied in PBS, pH6.0, without preservative.This antibody is purified through a protein A column.

Protein Information

Synonyms SGRF	
FunctionAssociates with IL12B to form the pro-inflammatory cytokine IL-23 that plays different roles in innate and adaptive immunity (PubMed:11114383). Released by antigen-presenting cells such as dendritic cells or macrophages, binds to a heterodimeric receptor complex composed of IL12RB1 and IL23R to activate JAK2 and TYK2 which then phosphorylate the receptor to form a docking site leading to the phosphorylation of STAT3 and STAT4 (PubMed:29287995, PubMed:32474165, PubMed:33606986). This process leads to activation of several pathways including p38 MAPK or NF-kappa-B and promotes the production of pro- inflammatory cytokines such as interleukin-17A/IL17A (PubMed:12023369). In turn, participates in the early and effective intracellular bacterial clearance (PubMed:32474165). Promotes the expansion and survival of T-helper 17 cells, a CD4-positive helper T-cell subset that produces IL-17, as well as other IL-17-producing cells (PubMed:17676044).	Ł
Cellular Location Secreted. Note=Secreted upon association with IL12B Secreted by activated dendritic and phagocytic cells and keratinocytes. Also
