Bmf Antibody

Catalog # ASC10170

Product Information

Application	WB, IF, E, IHC-P
Primary Accession	Q96LC9
Other Accession	NP_277038, 15723378
Reactivity	Human
Host	Rabbit
Clonality	Polyclonal
Isotype	IgG
Calculated MW	20508
Concentration (mg/ml)	1 mg/mL
Conjugate	Unconjugated
Application Notes	Bmf antibody can be used for detection of Bmf by Western blot at 2.5 and 5 g/mL. A band at approximately 25 kDa can be detected. Antibody can also be used for immunohistochemistry starting at 10 g/mL. For immunofluorescence start at 10 g/mL.

Additional Information

Gene ID	90427
Other Names	Bmf Antibody: Bcl-2-modifying factor, Bcl2 modifying factor
Target/Specificity	BMF;
Reconstitution & Storage	Bmf antibody can be stored at 4°C for three months and -20°C, stable for up to one year. As with all antibodies care should be taken to avoid repeated freeze thaw cycles. Antibodies should not be exposed to prolonged high temperatures.
Precautions	Bmf Antibody is for research use only and not for use in diagnostic or therapeutic procedures.

Protein Information

Name	BMF
Function	May play a role in apoptosis. Isoform 1 seems to be the main initiator.
Tissue Location	Isoform 1 is mainly expressed in B-lymphoid cells. Isoform 2 and isoform 3 are mainly expressed in B-CLL and normal B- cells.

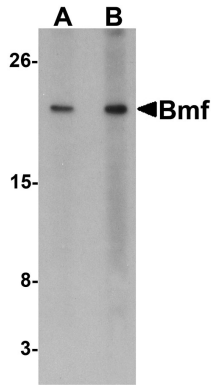

Background

Bmf Antibody: Apoptosis is related to many diseases and development. Members in the Bcl-2 family are critical regulators of apoptosis by either inhibiting or promoting cell death. Bcl-2 homology 3 (BH3) domain is a potent death domain. BH3-only proteins, including Bad, Bid, Bik, Hrk, Bim, Noxa, and PUMA, form a growing subclass of the Bcl-2 family. A novel BH3-only protein was recently identified in human and mouse and designated Bmf (for Bcl-2-modifing factor). The BH3 domain in Bmf is required both for binding to Bcl-2 proteins and for triggering apoptosis. In healthy cells, Bmf associates with the dynein light chain 2 (DLC2) component of the myosin V motors and is sequestered by the cell's actin cytoskeleton. Disruption of the actin cytoskeleton, either by depolymerization of actin filaments or by detachment of cells from the extracellular matrix, triggers release and activation of Bmf, initiating the downstream apoptotic program. Bmf is constitutively expressed in many tissues.
