

# TAB1 Antibody

Catalog # ASC10266

## Product Information

---

<b>Application</b>	WB, IF, ICC, E
<b>Primary Accession</b>	<a href="#">Q15750</a>
<b>Other Accession</b>	<a href="#">NP_006107</a> , <a href="#">5174703</a>
<b>Reactivity</b>	Human, Mouse
<b>Host</b>	Rabbit
<b>Clonality</b>	Polyclonal
<b>Isotype</b>	IgG
<b>Calculated MW</b>	54644
<b>Concentration (mg/ml)</b>	1 mg/mL
<b>Conjugate</b>	Unconjugated
<b>Application Notes</b>	TAB1 antibody can be used for the detection of TAB1 by Western blot at 0.5 to 2 $\mu$ g/mL. Antibody can also be used for immunocytochemistry starting at 1 $\mu$ g/mL. For immunofluorescence start at 2 $\mu$ g/mL.

## Additional Information

---

<b>Gene ID</b>	10454
<b>Other Names</b>	TAB1 Antibody: 3'-Tab1, MAP3K7IP1, TGF-beta-activated kinase 1 and MAP3K7-binding protein 1, Mitogen-activated protein kinase kinase kinase 7-interacting protein 1, TAK1-binding protein 1, mitogen-activated protein kinase kinase kinase 7 interacting protein 1
<b>Target/Specificity</b>	MAP3K7IP1;
<b>Reconstitution &amp; Storage</b>	TAB1 antibody can be stored at 4°C for three months and -20°C, stable for up to one year. As with all antibodies care should be taken to avoid repeated freeze thaw cycles. Antibodies should not be exposed to prolonged high temperatures.
<b>Precautions</b>	TAB1 Antibody is for research use only and not for use in diagnostic or therapeutic procedures.

## Protein Information

---

<b>Name</b>	TAB1
<b>Synonyms</b>	MAP3K7IP1
<b>Function</b>	Key adapter protein that plays an essential role in JNK and NF-kappa-B activation and proinflammatory cytokines production in response to stimulation with TLRs and cytokines (PubMed: <a href="#">22307082</a> , PubMed: <a href="#">24403530</a> ). Mechanistically, associates with the catalytic domain of MAP3K7/TAK1 to trigger MAP3K7/TAK1 autophosphorylation leading to its full activation

(PubMed:[10838074](#), PubMed:[25260751](#), PubMed:[37832545](#)). Similarly, associates with MAPK14 and triggers its autophosphorylation and subsequent activation (PubMed:[11847341](#), PubMed:[29229647](#)). In turn, MAPK14 phosphorylates TAB1 and inhibits MAP3K7/TAK1 activation in a feedback control mechanism (PubMed:[14592977](#)). Also plays a role in recruiting MAPK14 to the TAK1 complex for the phosphorylation of the TAB2 and TAB3 regulatory subunits (PubMed:[18021073](#)).

#### Cellular Location

Cytoplasm, cytosol. Endoplasmic reticulum membrane; Peripheral membrane protein; Cytoplasmic side. Note=Recruited to the endoplasmic reticulum following interaction with STING1

#### Tissue Location

Ubiquitous..

## Background

**TAB1 Antibody:** TAB1 was identified as a regulator of the MAP kinase kinase kinase TAK1/MAP3K7, which is known to mediate various intracellular signaling pathways, such as those induced by TGF-beta and members of the Toll-IL-1R (TIR) superfamily, thus acting as an intermediate in both proliferative and innate and adaptive immune responses. This protein, together with either TAB2 or TAB3, activates TAK1 kinase in response to upstream signals. It has been shown that the C-terminal portion of TAB1 is sufficient for binding and activation of TAK1, while a portion of the N-terminus acts as a dominant-negative inhibitor of TGF-beta, demonstrating how this protein can function as a mediator between TGF-beta receptors and TAK1.
