

TRPC6 Antibody

Catalog # ASC10451

Product Information

Application	WB, E, IHC-P
Primary Accession	Q9Y210
Other Accession	AAH93658 , 62739910
Reactivity	Human, Mouse
Host	Rabbit
Clonality	Polyclonal
Isotype	IgG
Calculated MW	106326
Concentration (mg/ml)	1 mg/mL
Conjugate	Unconjugated
Application Notes	TRPC6 antibody can be used for the detection of TRPC6 by Western blot at 0.5 - 1 μ g/mL. Antibody can also be used for immunohistochemistry starting at 10 μ g/mL.

Additional Information

Gene ID	7225
Other Names	TRPC6 Antibody: TRP6, FSGS2, TRP6, Short transient receptor potential channel 6, Transient receptor protein 6, TrpC6, transient receptor potential cation channel, subfamily C, member 6
Target/Specificity	TRPC6; This antibody may cross-react with TRPC3.
Reconstitution & Storage	TRPC6 antibody can be stored at 4°C for three months and -20°C, stable for up to one year. As with all antibodies care should be taken to avoid repeated freeze thaw cycles. Antibodies should not be exposed to prolonged high temperatures.
Precautions	TRPC6 Antibody is for research use only and not for use in diagnostic or therapeutic procedures.

Protein Information

Name	TRPC6 {ECO:0000303 PubMed:9930701, ECO:0000312 HGNC:HGNC:12338}
Function	Forms a receptor-activated non-selective calcium permeant cation channel (PubMed: 19936226 , PubMed: 23291369 , PubMed: 26892346 , PubMed: 9930701). Probably is operated by a phosphatidylinositol second messenger system activated by receptor tyrosine kinases or G-protein coupled receptors. Activated by diacylglycerol (DAG) in a membrane-delimited fashion, independently of protein kinase C (PubMed: 26892346). Seems not to be activated by intracellular calcium store depletion.

Cellular Location	Cell membrane; Multi-pass membrane protein
Tissue Location	Expressed primarily in placenta, lung, spleen, ovary and small intestine. Expressed in podocytes and is a component of the glomerular slit diaphragm.

Background

TRPC6 Antibody: The mammalian transient receptor potential (TRP) superfamily can be divided into three major families including the "canonical TRP" (TRPC) family. The seven members of this family share the activation through PLC-coupled receptors and have been suggested to be components of receptor-regulated cation channels in different cell types. Furthermore, the members of the TRPC3/6/7 subfamily can be activated by diacylglycerol (DAG) analogs, suggesting a possible mechanism of activation of these channels by PLC-coupled receptors. When expressed in transfected cells, TRPC6 acts as a non-selective store-independent receptor-activated cation channel. It is activated by DAG in a PKC-independent manner and is insensitive to IP3 activation. There is increasing evidence that TRPC6 encodes endogenous DAG-activated receptor-operated cation channels in vivo.
