

SPRYD2 Antibody

Catalog # ASC11347

Product Information

Application	WB, IF, E, IHC-P
Primary Accession	Q8N3K9
Other Accession	NP_705838 , 62241003
Reactivity	Human, Mouse, Rat
Host	Rabbit
Clonality	Polyclonal
Isotype	IgG
Calculated MW	449211
Concentration (mg/ml)	1 mg/mL
Conjugate	Unconjugated
Application Notes	SPRYD2 antibody can be used for detection of SPRYD2 by Western blot at 1 - 2 μ g/mL. Antibody can also be used for immunohistochemistry starting at 2.5 μ g/mL. For immunofluorescence start at 20 μ g/mL.

Additional Information

Gene ID	202333
Other Names	Cardiomyopathy-associated protein 5, Dystrobrevin-binding protein 2, Genethonin-3, Myospryn, SPRY domain-containing protein 2, Tripartite motif-containing protein 76, CMYA5, C5orf10, DTNBP2, SPRYD2, TRIM76
Target/Specificity	CMYA5; SPRYD2 antibody is predicted to not cross-react with other SPRYD protein family members. At least four isoforms of SPRYD2 are known to exist.
Reconstitution & Storage	SPRYD2 antibody can be stored at 4°C for three months and -20°C, stable for up to one year. As with all antibodies care should be taken to avoid repeated freeze thaw cycles. Antibodies should not be exposed to prolonged high temperatures.
Precautions	SPRYD2 Antibody is for research use only and not for use in diagnostic or therapeutic procedures.

Protein Information

Name	CMYA5
Synonyms	C5orf10, DTNBP2, SPRYD2, TRIM76
Function	May serve as an anchoring protein that mediates the subcellular compartmentation of protein kinase A (PKA) via binding to PRKAR2A (By similarity). May function as a repressor of calcineurin- mediated transcriptional activity. May attenuate calcineurin ability to induce slow-fiber gene program in muscle and may negatively modulate skeletal muscle

regeneration (By similarity). Plays a role in the assembly of ryanodine receptor (RYR2) clusters in striated muscle (By similarity).

Cellular Location

Nucleus {ECO:0000250|UniProtKB:A0A286XF80}. Sarcoplasmic reticulum {ECO:0000250|UniProtKB:A0A286XF80}. Cytoplasm {ECO:0000250|UniProtKB:Q70KF4}. Cytoplasm, perinuclear region {ECO:0000250|UniProtKB:A0A286XF80}. Cytoplasm, myofibril, sarcomere, M line. Note=Found predominantly at the periphery of the nucleus but also throughout the cell. Localized in lysosomes (By similarity). In skeletal muscles, localizes along myofiber periphery, at costameres (By similarity). Predominantly flanks Z-disks (By similarity). Occasionally present at the M-band level Colocalized with RYR2 in the sarcoplasmic reticulum (By similarity) {ECO:0000250|UniProtKB:A0A286XF80}

Tissue Location

Expressed in skeletal muscle; at a strong level and in heart.

Background

SPRYD2 Antibody: SPRYD2, also known as Myospryn, was originally identified as the muscle-specific partner of dysbindin and as a Mef-2 target gene. It is a large scaffolding protein localized to the Z-disc/costamere region of striated muscle. SPRYD2 includes a noncanonical tripartite motif (TRIM-like) that lacks the RING domain but consists of a B-box coiled coil (BBC), fibronectin 3 (FN3) repeats, and SPRY domains. SPRYD2 interacts with desmin and calcineurin, and it has been suggested to play a role in the biogenesis of lysosome and negatively regulates slow-fiber-type transformation and skeletal muscle regeneration. SPRYD2 is dysregulated in Duchenne muscular dystrophy.
