KANK2 Antibody

Catalog # ASC11647

Product Information

Application	WB, IF, E, IHC-P
Primary Accession	Q63ZY3
Other Accession	NP_056308, 258613875
Reactivity	Human, Mouse, Rat
Host	Rabbit
Clonality	Polyclonal
Isotype	IgG
Calculated MW	91174
Concentration (mg/ml)	1 mg/mL
Conjugate	Unconjugated
Application Notes	KANK2 Antibody can be used for detection of KANK2 by Western blot at 1 g/mL.

Additional Information

Gene ID	25959
Other Names	KN motif and ankyrin repeat domain-containing protein 2, Ankyrin repeat domain-containing protein 25, Matrix-remodeling-associated protein 3, SRC-1-interacting protein, SIP, SRC-interacting protein, SRC1-interacting protein, KANK2, ANKRD25, KIAA1518, MXRA3, SIP
Target/Specificity	KANK2; Two alternatively spliced transcript variants encoding different isoforms have been identified.
Reconstitution & Storage	KANK2 antibody can be stored at 4℃ for three months and -20℃, stable for up to one year.
Precautions	KANK2 Antibody is for research use only and not for use in diagnostic or therapeutic procedures.

Protein Information

Name	KANK2
Synonyms	ANKRD25, KIAA1518, MXRA3, SIP
Function	Involved in transcription regulation by sequestering in the cytoplasm nuclear receptor coactivators such as NCOA1, NCOA2 and NCOA3 (PubMed:17476305). Involved in regulation of caspase-independent apoptosis by sequestering the proapoptotic factor AIFM1 in mitochondria (PubMed:22371500). Pro-apoptotic stimuli can induce its proteasomal degradation allowing the translocation of AIFM1 to the nucleus to induce apoptosis (PubMed:22371500). Involved in the negative control of vitamin D

receptor signaling pathway (PubMed:24671081). Involved in actin stress fibers formation through its interaction with ARHGDIA and the regulation of the Rho signaling pathway (PubMed:17996375, PubMed:25961457). May thereby play a role in cell adhesion and migration, regulating for instance podocytes migration during development of the kidney (PubMed:25961457). Through the Rho signaling pathway may also regulate cell proliferation (By similarity).

Cellular Location Cytoplasm. Mitochondrion

Tissue Location Strongly expressed in cervix, colon, heart, kidney and lung. Expressed in kidney glomerular podocytes and mesangial cells (at protein level).

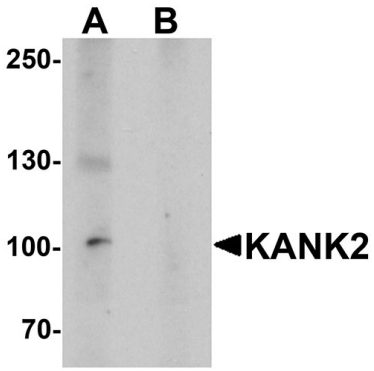

Background

KANK2 Antibody: Ankyrins are membrane adaptor molecules that play important roles in the control of cytoskeleton formation by regulating actin polymerization. KANK2 (KN motif and ankyrin repeat domain-containing protein 2), was initially identified as a steroid receptor coactivator (SRC) interacting protein (SIP) that could sequester steroid receptor coactivators in the cytoplasm. More recent experiments have shown that while KANK2 is widely expressed, in kidney podocytes, KANK2 localizes to foot processes, suggesting that KANK2 may contribute to controlling actin dynamics in podocyte foot processes.
