

# HIV-1 p24 Antibody [8G9] (HRP)

Catalog # ASC12021

## Product Information

|                              |                                                                                           |
|------------------------------|-------------------------------------------------------------------------------------------|
| <b>Application</b>           | WB, E                                                                                     |
| <b>Primary Accession</b>     | <a href="#">P04591</a>                                                                    |
| <b>Other Accession</b>       | <a href="#">AAB50258</a> , <a href="#">327745</a>                                         |
| <b>Reactivity</b>            | Virus                                                                                     |
| <b>Host</b>                  | Mouse                                                                                     |
| <b>Clonality</b>             | Monoclonal                                                                                |
| <b>Isotype</b>               | IgG1                                                                                      |
| <b>Clone Names</b>           | 8G9                                                                                       |
| <b>Calculated MW</b>         | 55930                                                                                     |
| <b>Concentration (mg/ml)</b> | 1 mg/mL                                                                                   |
| <b>Conjugate</b>             | HRP                                                                                       |
| <b>Application Notes</b>     | PM-6335-HRP can be used for detection of p24 by Western blot or ELISA at 0.2 – 0.5 µg/mL. |

## Additional Information

|                                     |                                                                                                                                                                                                  |
|-------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Gene ID</b>                      | 155030                                                                                                                                                                                           |
| <b>Other Names</b>                  | Gag polyprotein, Pr55Gag, Matrix protein p17, MA, Capsid protein p24, CA, Spacer peptide p2, Nucleocapsid protein p7, NC, Spacer peptide p1, p6-gag, gag                                         |
| <b>Target/Specificity</b>           | GAG; By Western blot, anti-HIV-1 p24 antibody detects a ~24 kDa, a ~41 kDa, and a ~55 kDa protein, corresponding to HIV-1 p24 and to its precursors p41 and p55, respectively, in HIV-1 samples. |
| <b>Reconstitution &amp; Storage</b> | HIV-1 p24 Monoclonal Antibody can be stored at 4°C for three months and -20°C, stable for up to one year.                                                                                        |
| <b>Precautions</b>                  | HIV-1 p24 Antibody [8G9] (HRP) is for research use only and not for use in diagnostic or therapeutic procedures.                                                                                 |

## Protein Information

|                          |                                                                                                                                                                                                                                                                                                                                                         |
|--------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Name</b>              | gag                                                                                                                                                                                                                                                                                                                                                     |
| <b>Function</b>          | [Gag polyprotein]: Mediates, with Gag-Pol polyprotein, the essential events in virion assembly, including binding the plasma membrane, making the protein-protein interactions necessary to create spherical particles, recruiting the viral Env proteins, and packaging the genomic RNA via direct interactions with the RNA packaging sequence (Psi). |
| <b>Cellular Location</b> | [Gag polyprotein]: Host cell membrane; Lipid- anchor. Host endosome, host multivesicular body {ECO:0000250 UniProtKB:P12493}. Note=These locations                                                                                                                                                                                                      |

are probably linked to virus assembly sites. The main location is the cell membrane, but under some circumstances, late endosomal compartments can serve as productive sites for virion assembly.  
{ECO:0000250|UniProtKB:P12493} [Capsid protein p24]: Virion.

## Background

---

**HIV-1 p24 Monoclonal Antibody:** The human immunodeficiency virus type 1 (HIV-1) particle consists of an envelope, a core and the region between the two termed matrix (1). The HIV-1 Gag protein is a late structural protein that contains four proteins: matrix (p17), capsid (p24), nucleocapsid (p7) and the p6 protein (2). The p24 constitutes the major core component of the virus and shows high degree of sequence conservation among HIV isolates. The Gag p24 has been used as an integral part of multicomponent HIV-1 vaccines (3).
