Background

Epitope tags provide a method to localize gene products in a variety of cell types, study the topology of proteins and protein complexes, identify associated proteins, and characterize newly identified, low abundance or poorly immunogenic proteins when protein specific antibodies are not available. HAT-tag is one of the more popular epitope tags for expressed recombinant proteins.

Images

Western blot analysis (1) 200ng, (2) 100ng, (3) 50ng, (4) 25ng, and (5) 12.5ng of a HAT-tagged recombinant protein using biotinylated anti-HAT-tag monoclonal antibody at 0.5 μ g/ml.
