

Anti-Monkey IgG IgA IgM (H&L) Secondary Antibody

Goat Polyclonal, Unconjugated Catalog # ASR2003

Product Information

Description Anti-MONKEY IgG IgA IgM (H&L) (GOAT) Antibody

Host Goat

ConjugateUnconjugatedTarget SpeciesMonkeyClonalityPolyclonal

Physical State Liquid (sterile filtered)

Host Isotype IgG

Target Isotype IgG IgA IgM

Buffer 0.125 M Sodium Borate, 0.075 M Sodium Chloride, 0.005 M EDTA, pH 8.0

Immunogen Monkey IgG, IgA and IgM whole molecules

Stabilizer None

Preservative 0.01% (w/v) Sodium Azide

Additional Information

Shipping Condition Wet Ice

Application Note Anti-Monkey IgG IgA IgM Antibody is suitable for immunoassays where

reactivity to different classes of monkey immunoglobulins is desired. Antibody has been tested by ELISA, western blot immunoblot, and

immunohistochemisty. Optimal concentrations in immunoassays should be

determined by the researcher.

Purity Anti-Monkey IgG IgA IgM Antibody was prepared from polyspecific

antiserum by immunoaffinity chromatography using whole immunoglobulin antigens coupled to agarose beads. Assay by immunoelectrophoresis resulted in a single precipitin arc against anti-Goat Serum. This product is suitable for the detection of all Monkey immunoglobulin classes, isotypes and

chain combinations.

Storage Condition Store vial at 4° C prior to opening. This product is stable for several weeks

at 4° C as an undiluted liquid. Dilute only prior to immediate use. For extended storage aliquot contents and freeze at -20° C or below. Avoid

cycles of freezing and thawing.

Precautions NoteThis product is for research use only and is not intended for therapeutic or

diagnostic applications.

Background

Monkey IgG IgA IgM (H&L) Antibody detects immunoglobulin G, A, and M from monkey. Immunoglobulin G binds to antigens and can neutralize or opsinize targts, and are predominantly involved in the secondary

immune response. Immunoglobulin A (IgA) is an antibody that plays a critical role in mucosal immunity. IgA has two subclasses (IgA1 and IgA2) and can exist in a dimeric form called secretory IgA (sIgA). Immunoglobulin M, or IgM, is a pentamer composed of 5 immunogobulin molecules linked through their F(c) domain by the J chain.
